SHORT NOTES – PDC Manager

PDC Manager is built on top of Microsoft Dynamics 365 Business Central, which enables creation of the PDC entries on a current date and post those entries on actual date of the cheque. Critical future payments for the business require regular monitoring. If the finance team gets notified regularly on such post-dated entries, it'd make the cashflow forecast far more accurate. This solution provides you such experience on your customer and vendor payments made

for the future.

Highlights of PDC Manager

In general, Dynamics 365 Business Central ERP solution, allows you to post any payment entries on the date selected in the Posting date in the journal and we may have to keep a track manually once the cheque is received and decide when it is to be posted. Whereas PDC Manager provides a unique solution to schedule your PDC entry the day when the cheque is received and allows you to create & post the journal on the actual cheque clearing date. This reduces the manual track on the cheques to and from vendors & customers. It also reduces the duplicate data entry and can make the reconciliation hassle free.

Benefits of PDC

- Hassle free Vendor & Customer future payments.
- Scheduled notification for PDC payments.
- Accurate cashflow forecasting
- Real time entries of PDC payments.
- Better collaboration with business partners.
