Havran

Save yourself trouble and time with decorative
ETL processes monitoring

**Does it take a lot of time for you to aggregate
all the information about data flows?
Do you get inaccurate information about errors while
managing your data?**

Havran is a solution that monitors ETL processes. With it, you
can browse the tasks executed during these processes. The tool
allows a swift reaction to the system's anomalies and thus –
it helps to terminate serious trouble prematurely.

Why customers use Havran:

- The companies that use big data, get firmer control over ETL processes with Havran

- The employees responsible for ETL processes spend less time on monitoring them efficiently and tend to like this task more

- The companies that use Havran, experience fewer major errors in their ETL processes. The errors can be terminated prematurely.

Readable visualizations

- Readable monitoring of ETL processes

- Decorative visualizations

Save time of the experts you hire!

High convenience

- Havran has intuitive UX and appealing UI

- The tool has built-in alerts about ETL process anomalies

- It is accessible even to people with no programming skills

Increase job satisfaction for employees responsible for data

Everything in one place

- All the visualizations are available in one place

- Havran provides intuitive information about the most important events in ETL processes

No more tedious searching for information about data!

Havran provides readable visualizations of ETL processes. The monitoring alerts about errors early in the process, so the users can react swiftly to trouble in their data warehouses.
