# iLab – Test Lab Operations & Management System

iLab is a Test Lab Operations and Management System (TLOMS) solution that empowers the management of Test Lab operations from a single platform.

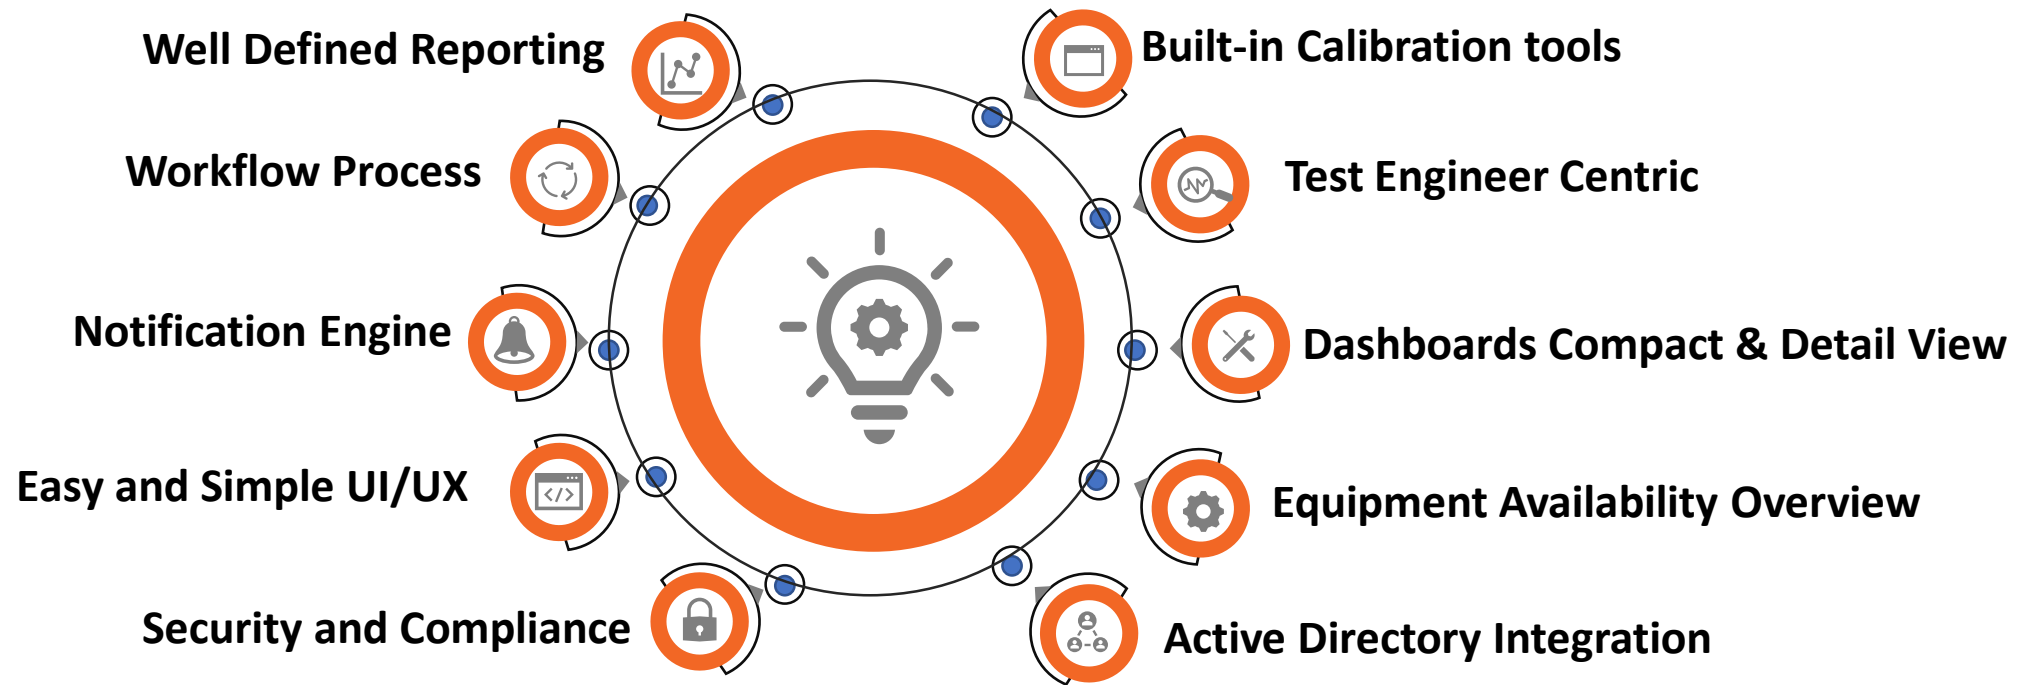

This solution is a comprehensive and end to end management of testing procedures for any QA and testing environment.

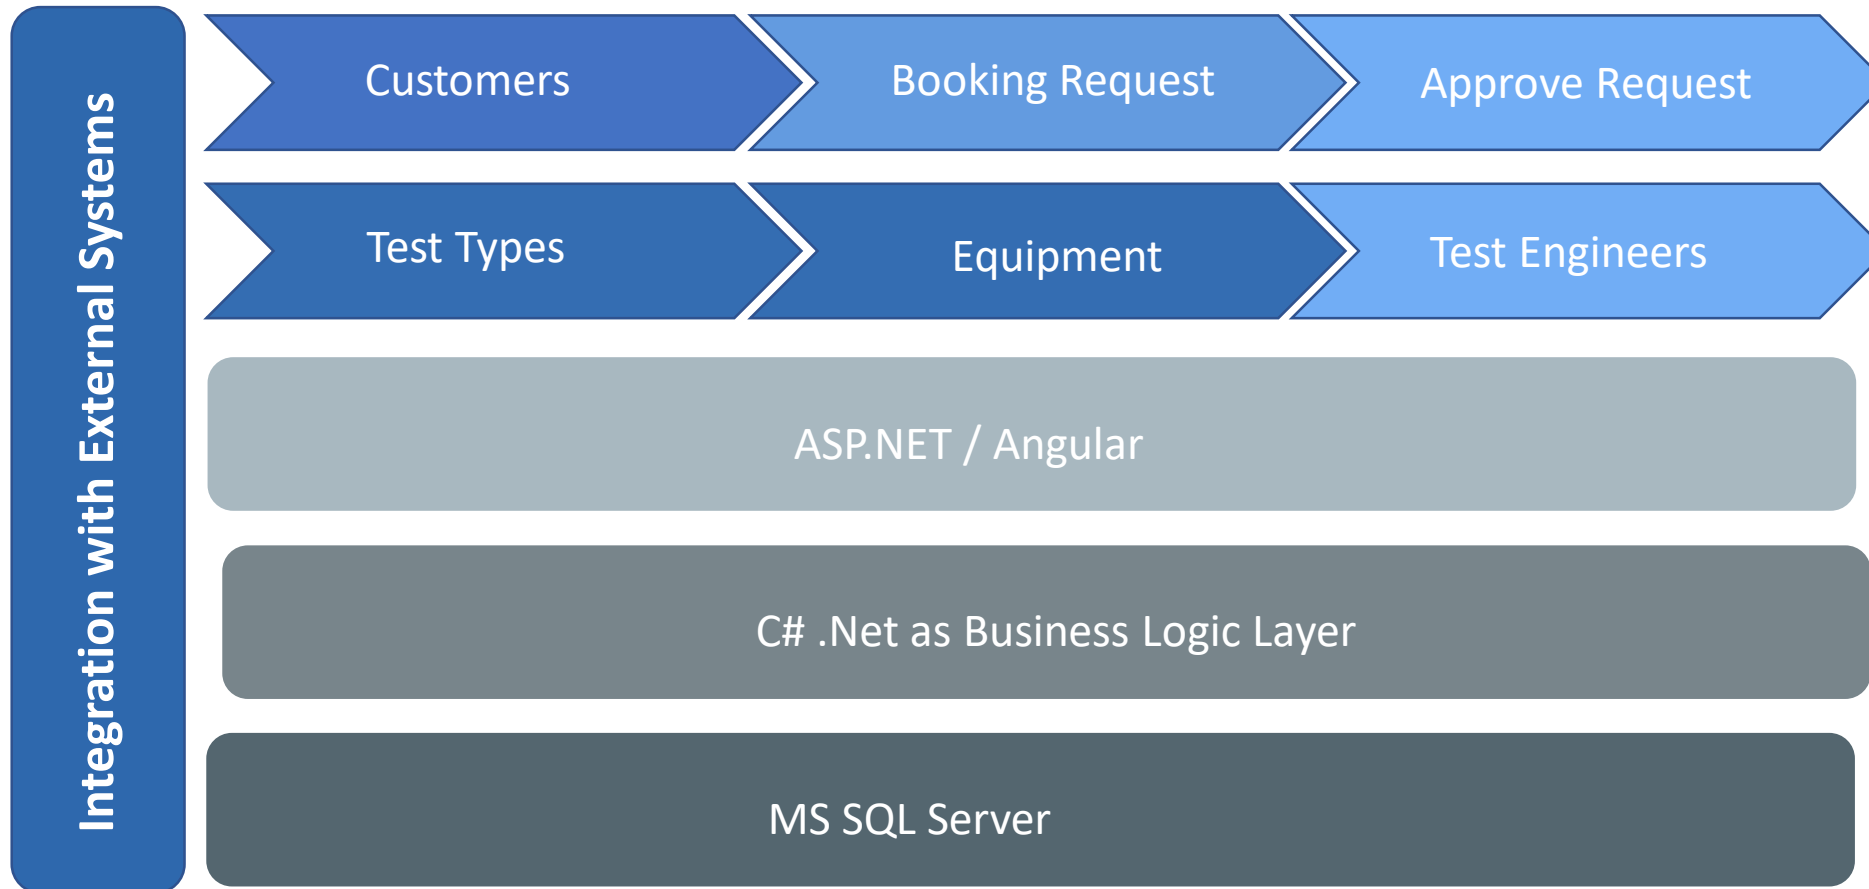

An ideal system for large/medium test labs to schedule, maintain, and track their operations completely online.

# CASE STUDIES

# Case Study

## CLIENT

Jabil Inc. is a United States-based global manufacturing services company. Headquartered in St. Petersburg, Florida, It has 90 facilities in 23 countries, and 175,000 employees worldwide

## CHALLENGE

- 
- Jabil was using tedious manual process to track end to end test flow process.
  - The test flow of each request would have to go through a hierarchical structure which is unique from customer to customer.
  - Internal store managers wanted to generate the barcode for all the samples during the stock take.

## SOLUTION

- 
- We build iLab as a product to fulfill the requirements, Application used MVC platform with MS SQL Server as backend.
  - Incorporated smart application to generate the barcode with the combination of request, sample, customer, test flow with the equipment schedule.
  - Test report generated by the equipment is captured, stored and accessible to test engineers, lab managers and customers.
  - System also designed to address calibration process. Comprehensive report builder is provided to generate ad-hoc reports.

**JABIL**

## RESULT

- 
- Visibility of customer request and its statuses
  - Monitoring real-time progress of test flow process
  - Automated equipment schedule and attaching test personnel to equipment
  - Tracking holiday and equipment calendar with downtime.
  - Tracking of test personnel shift & absence calendar.
  - Optimized the equipment utilization due to the visibility of real-time progress.
  - Improved the productivity of test lab operations.

# Case Study

## CLIENT

Technoprobe is a leader in the microelectronics industry, specializing in design and manufacturing of Probe Card. Probe cards are necessary to test semiconductor chips.

## CHALLENGE

- 
- More robust workflow implementation.
  - Better user experience, rich user interface and device compatibility.
  - Better visibility, tracking of the eTag movement.
  - Monitoring of the eTag traffic at each stage.
  - Better visibility on the schedule with test person allocation.

## SOLUTION

- 
- Technoprobe testing solution was build using Angular.js.
  - Ability to generate the order with an e-Tag that will be carry forward throughout the fulfilment process.
  - Bird's eye view of the running E-tags.
  - Ability to monitor all the incoming order on Dashboard categorized by priority, status, category and sub-category.
  - Flexible reporting module.
  - Comprehensive Analytics included for each department.
  - Schedule jobs placed to integrate with HQ system in order to update the latest status of the eTag.

## RESULT

Technoprobe has quickly adopted the application and started allocating eTags. The key features like Schedule & Shipment was helpful for every user to plan and process the design and testing. This has improved the process times effectively.

# Case Study

## CLIENT

GLOBALFOUNDRIES, a leading full-service semiconductor design, development, fabrication and innovation company with locations across the globe.

## CHALLENGE

Global Foundries was using tedious manual process to track end to end test flow process. GFS also wanted customer to have visibility on their request and track progress of the request. Equipment utilization and resource planning was also major challenge.

## SOLUTION

- Design and developed a user-friendly online capacity booking process system for GFS. The objective is to develop a test lab system to submit request, plan, schedule and record test results. This would help improve the test engineering process, thus increasing the visibility.
- We proposed existing iLab product as a base and customized to suit their requirements. Application used MVC platform with MS SQL Server as backend.

## RESULT

- Visibility of booking capacity.
- Tracking of real-time progress of test flow process.
- Optimized the equipment utilization due to the visibility of real-time progress.
- Improved the productivity of test lab operations.
