

# Prevail In Digital: Trust The Cloud To Support Continuous Enterprise Transformation

## About MSRCosmos:

MSRCosmos is a Microsoft Gold Certified Partner with SAP on Azure Advanced Specialization. We work closely with our clients to help them realize their Digital Transformation goals. From modernizing applications to migrating them to the cloud to meet business requirements.

At MSRCosmos, we utilize best-in-class, in-house and third-party tools covering cloud assessment and application migration as well as hybrid cloud governance and management.

Starting with a proof-of-concept we will answer questions quickly, identify gaps and give a good estimation of the task ahead. After migrating non-critical applications and validating back-up / restore processes, we work to migrate core infrastructure components. Then we tune, enhance, and optimize.

# MSRCosmos Application Modernization Offer

During the 5-day assessment, we use our set of best practices and a trained approach to completely de-risk your app modernization journey.

## 5 Day Assessment - Agenda

Our application modernization assessment captures both business and technical aspects of app transformation. The assessment generally provides customers with

- Modernization Plan
- Design Plan
- Cost Estimation

Additional requirements can be added to the assessment catering to customer needs.

The web application modernization generally includes the utilization of migration tools such as –

- App Service Migration Tools
- Hybrid Connection + Relays
- App Insights
- Azure Key Vaults
- Azure App service plan
- AKS
- DevOps and more

### 1. Discovery (day 1)

1 day of discovery sessions to capture the current landscape both from technical and business point of view.

#### Outcomes:

- Current landscape report
- Current IT challenges report
- Business challenges with respective to current application setup

### 2. Analyze (day 2&3)

1 day of discovery sessions to capture the current landscape both from technical and business point of view. 2 days of interactive sessions with the client IT and web application team to go over any two of the current applications in production and preparing a checklist for possible improvements /enhancements which include various azure components listed but not limited to belowview.

- Web application Migration
- Database Migration
- DevOps
- Container orchestration
- Security

#### Outcomes:

Analyze applications to be migrated to Azure along with initial roadmap and approach

### 3. Recommendations (day 4&5)

2 days of evaluating various modernization options available with inputs from both Business and IT. Then preparing a detailed Migration plan with recommendations.

#### Outcomes:

Recommendations document along with action plan for migration of existing apps to Azure.
