Title: Security audit of existing solution: 3-week assessment
Subtitle: Spyrosoft's top Security and DevOps engineers will perform an extensive review of your current Security setup and configuration to help you improve your Azure Security Posture

We are a Microsoft Azure Gold Partner offering an extensive range of cloud services: from audits to cloud migration and cloud architecture consulting. We are also the fastest growing technology company according to the Financial Times.

The goal of this assessment is a review of your current Azure Environment according to the Azure Security Benchmark, which includes following key areas:

- Network security
- Identity Management
- Data Protection
- Monitoring and Threat Detection
- Backup and recovery
- Endpoint security

Azure Services that will be included in the review:

- RBAC in compute services such as Azure Kubernetes Clusters, Azure Functions, Azure App service
- RBAC in storage services such as Azure SQL Databases, CosmosDB, Storage Accounts
- Azure VNet's policies
- Azure Active Directory setup
- Audit of Azure Active Directory B2C setup
- Azure Threat Detection capabilities
- Azure Key Vault secrets and certificates management
- Azure Activity Log alerts for suspicious activities

The goal of this audit is to ensure that the solution developed is adequately secured from third-party access and to create a list of suggestions that would be helpful in increasing the security if required. The scope of the audit can be extended or reduced to address the specifics of your solution.
