

THE FUTURE IS HERE FOR MODERN DATA WAREHOUSE

How cloud technology can handle it?

Why do you need a Data Warehouse?

Data is essential in **empowering** every enterprise's journey in **digital transformation**. The ability to bring together datasets across the silos to derive deep insights is key to business success.

So, when do you need a data warehouse?

Multiple Data Sources

Your business consume many data, on the other hand data collection for analysis is time consuming. The more data you need, the longer it takes.

Flexible Analysis Needs

You have supported transactional system. However to get insights, data separation between transactional and analytics is required.

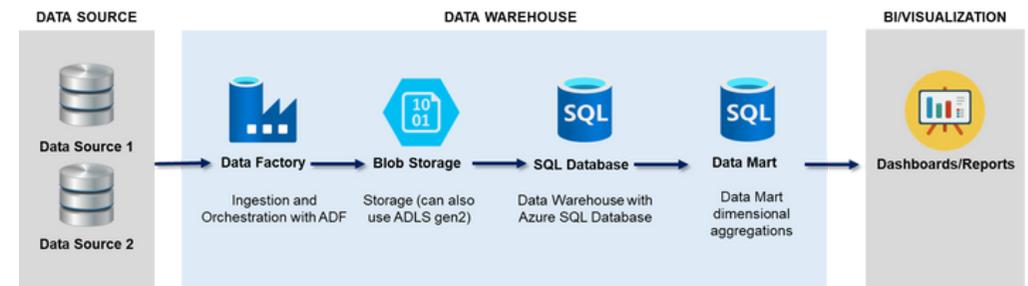

Query and Analytic Performance Improvement

You experience problem with reporting performance and data usage is large. You need to improved your query and or analytic performance

During 2020 and 2021, **cloud computing exploded** as work went virtual and businesses adapted to the global pandemic by focusing on the delivery of digital service.

We adopt cloud technology for the modern data warehouse. We name it **Oversight** for Data Warehouse as a Services (DWaaS). The following images shows how it works:

Oversight's Architecture

Benefit:

- Develop a data warehouse **efficiently**
- Implement **Microsoft Azure** cloud technology
- Easy-to-access **custom visualization** with our technology
- **Connect** your existing Business Intelligence tools (PowerBI, Tableau, etc) to Oversight

Trust everything in your data warehouse.

We can help you leverage data with cloud technology by subscribing to our services.
