

COVID.ai Screening Solution

Bringing intelligent no-touch screening to the people through AI-powered mobile apps & devices

COVID.ai revolutionises screening and testing for the entire population to help curb the spread of Covid-19 through data intelligence.

The touchless screening app empowers healthcare workers to go out into the field and register citizens leveraging facial recognition to ensure unique results.

The mobile app then enables in-field screening via the required Covid-19 legislative data, with automated and prompted medical data capturing via connected Bluetooth medical devices, such as thermal if required.

Finally, the mobile app enables geo-tagging, thereby providing 1:1 citizen mapping to their medical information, location and screening data. All of this information is aggregated and analysed in real-time to guide resource deployment and decision making in response to Covid-19.

Why COVID.ai?

The COVID.ai screening solution ensures better, faster and more cost-effective screening with real-time analytics that help curb the spread and progression of Covid-19.

Touchless screening with COVID.ai

COVID.ai - accessible, scalable and intelligent screening from anywhere, anyplace.

-  **DEPLOY RESOURCES and MAKE DECISIONS** based on data intelligence
-  Real-time patient profile, **SCREENING OUTCOME** and **GEO-LOCATION** capturing
