

# REDUCE THE BURDEN OF MANAGEMENT WITH MICROSOFT ENDPOINT CONFIGURATION MANAGER

In a recent study, the average cost of a data breach for an organization is over \$3.92 million. The same study identified that 48% of all breaches come from a BYOD (Bring Your Own Device) endpoint. With the shift to a more hybrid workforce, more and more companies are allowing users to access some sort of data on BYOD.

As part of the new hybrid workforce paradigm, trying to manage endpoints that access your data and your network can be a daunting task - or is it? With Microsoft Endpoint Configuration Manager (MECM) and the ConvergeOne team of engineers, we can streamline the setup and configuration needed to get the platform working for you.

No matter if you are an on-premises organization, an all-cloud-based organization, or somewhere in between, MECM can help automate tasks, prioritize efforts, connect with IT and security teams, improve the end-user experience, and assist with modernizing existing workloads.

## Supports a diverse BYOD ecosystem

Provision, reset, repurpose, and manage laptops and mobile devices with minimal infrastructure and overhead.

## Endpoint security with Zero Trust controls

Securely access corporate resources through continuous assessment and intent-based policies with Conditional Access App Control.

## Protect data with or without device enrollment

Onboard, manage, and report on encryption, anti-virus, firewalls, and other security technologies with Mobile App Management (MAM) and Mobile Device Management (MDM) policies.

## Advanced Endpoint Analytics

Proactively improve the user experience and track progress against organization or industry baselines

## Maximize your return on investment

Get the most out of your Microsoft 365 integrated solution.
