Dynamic Demand Forecasting - Setup & Deployment

Plans

Tangent Works

Dynamic Demand Forecasting, incl. 2 months service

- This package is designed to leverage our proven templates and expert advice on how to optimize your implementation of the TIM engine and achieve maximum return on your investment.

- Included in this offer:
    - Deep dive technical workshop to validate the use case, technical requirements and understand existing data sources.
    - Assess and collect data requirements for optimal model generation, including external data sources.
    - Consulting services to extract and model data from internal and external systems as required for TIM (up to 10 services days).
    - Support and/or execute the development of the initial models and set up the frameworks for future iterations.
    - Document the baseline accuracy levels and create a roadmap for the reduction of residual error and increased accuracy.
    - Project management services for the first 60 days of deployment.
    - Creation of an economic value analysis for your TIM implementation including ROI simulations.
