

# Identity is the cornerstone of your modern workplace

Identity and Access Services

Your organization is transforming digitally, and your employees expect to be able to work anytime, from anywhere, using any device. To achieve this, you'll need to shift from using a traditional security perimeter to the flexibility of Identity as the control plane for securing your data and systems—inside and out of your network's boundary.

Identity and Access Services (IdAS) from Microsoft Industry Solutions Delivery helps you manage security and risk while simplifying access for your employees. The IdAS Solution's identity and access management capabilities help you modernize and secure your identity environment providing both on-premises and cloud capabilities.

## Capabilities

IdAS provides you with the end-to-end capabilities to establish a hybrid identity that spans your on-premise datacenters and the public cloud services you use, so that you can access your organization's applications securely anytime, anywhere. This customizable approach modernizes and simplifies access for your employees while enabling you to take advantage of the latest innovations in cloud identity and access management capabilities when you extend your on-premise Active Directory to Microsoft Azure Active Directory.

### Identity and Access Services

Modernize and secure your identity environment, spanning on-premises and cloud identities.

#### Core Identity

Enable secure remote work while starting your Zero Trust journey with well-formed hybrid cloud identities for secure access to cloud services and resources.

#### Privileged Access

Implement key identity measures that meet high-security requirements across hybrid-cloud environments using Microsoft-recommended practices.

#### Application Identity

Consolidate application identities using Azure Active Directory's single identity provider for Software as a Service (SaaS) applications and using Single Sign-on (SSO) for other apps.

---

## Scope

---

The **Identity and Access Services** solution from Microsoft **Delivery** accelerates the engagement of your stakeholders across the organization, IT, and security using structured and interactive programs. We help guide you to a modernization strategy, mapping your goals for secure identity and access management both on-premise and in the cloud.

### Identity and Access Services

---

## Perspective

---

**Your environment is onboarded to Azure Active Directory** Traditional security perimeters are disappearing with the rise of cloud and mobility services. From our Incident Response services we learn that most breaches involve compromised identities. Identity is the new control plane for security, requiring a focus on protecting identities and the organization from identity-based attacks and compromise. Microsoft's identity and access management (IAM) solutions help you make sure that users are authenticated before being granted access to applications and data.

# 40%

*By 2022, 40% of global midsize and larger enterprises will use identity and access management as a service (IDaaS) capabilities to fulfill most of their identity and access management needs.<sup>1</sup>*

**Cloud and mobility initiatives are driving adoption of hybrid identity**, which augments existing on-premises identity platforms with identity-as-a-service capabilities. These capabilities allow you benefit from new application models such as Platform as a Service (PaaS) and Software as a Service (SaaS) that help mitigate staffing concerns.

**With the Identity and Access Services Solution**, Microsoft Delivery helps you extend your on-premises Active Directory environment to Microsoft Azure Active Directory. IdAS enables you to take advantage of current innovations in Identify and Access Management such as risk-based authentication and conditional access control, identity protection, privileged identity management (PIM), and B2B and B2C scenarios—all while providing additional security for privileged access and identity administration.
