

Changing how care is planned

Meet the needs of caregiving teams as health and social care enters the digital age.

Shift balance from secondary to primary to self-care.

Improve costs and resource management whilst reducing time on tasks.

Enable agile flow of funds and resources across the ICS.

Create early interventions models to reduce the need for reactive services later on.

“Shifting organisational culture towards a different way of consuming data, reporting and intelligence was a slow process. Power BI helped us with that journey at the CGG to build a slow groundswell across all of the partners within the ICS.”

James Woodland: Deputy Director of Business Intelligence, Dorset CCG

Provide staff with the digital tools to streamline and speed up recurrent tasks for more productive working.

Harness insights to make more informed decisions that feed into wider nationwide policies and inclusive healthcare as standard.

Optimise operations and maximise the performance of your entire health and care organisation with the **Microsoft Cloud for Healthcare**.
