

Azure Discovery as a Service Assessment

Assess and understand your options when migrating and modernising with Azure

Successfully carving a path to Azure is under-pinned by careful and considered preparation and planning. With so many routes to Azure, and a plethora of options and complex economics to consider, migrating can seem a daunting task even for the most experienced technologists.

With Version 1's Azure Discovery & Assessment Service, we can conduct a data-driven discovery that aligns with Microsoft's best practice Cloud Adoption Framework. We can assess your needs, compelling events, and I.T portfolio to help you create a business case for Azure. The outputs from this exercise will help you to make an informed decision by identifying areas for remediation, and providing application modernisation and migration roadmap recommendations - saving time and money in the process.

Discovery & Assessment Phases:

- **Mobilisation** - Define compelling events, goals, and requirements
- **Discovery** - Build an understanding of your I.T portfolio
- **Assessment** - Analyse and appraise your data
- **Plan & Action** - Map out your path to Azure

Deliverables

- Discovery and Assessment Report / Executive Presentation
- Data collected and collated during discovery
- High-level Migration Plan and Estimated Cost
- Supporting migration Business Case and TCO

Why Choose Version 1?

- Version 1 has been working in the Microsoft cloud technology arena since 2006. With deep expertise across the Microsoft stack, Version 1 is recognised as one of the most competent partners in the ecosystem.
