Training eXchange Point   www.salt.na

Learn how to use the ever-evolving apps and software you need for increased productivity, effective communication and effortless collaboration.

Microsoft Technology

Microsoft's suite of systems, software and apps' ease of use and data security makes it the go-to technology for most of the business world.
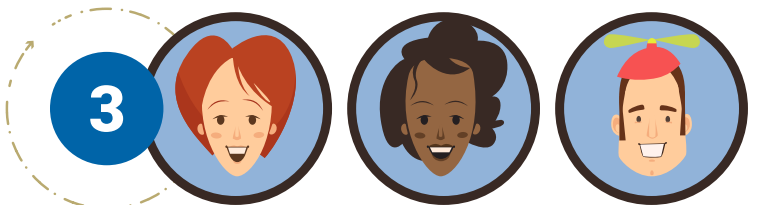

1

Cloud Technology

Salt has been a Namibian leader in Cloud technology for the last 20 years, embracing Microsoft Cloud since its inception. We have in-house experts who work with the technology daily, who have been successfully transferring these skills to beginners, intermediate and even advanced users for years.

2

In-House Experts

Our engineers are not only hands-on experienced, but formally certified digital transformers. Salt engineers work day-in, day-out with individual users as well as companies.
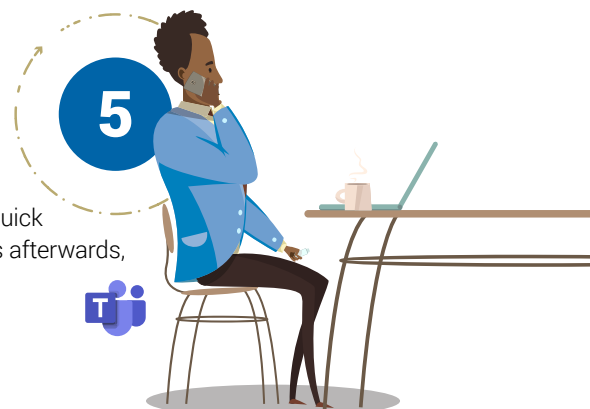

3

High-Level Sessions

We usually start off with a high-level session which covers basics, so as not to drain the concentration of the end-user having to learn the new application. In-depth, follow up sessions are organised according to business function and application. Assessments are and can be performed, and surveys are conducted to assess competency levels at every phase of the training journey, from beginners to advanced users.

4

5

Assisted Check-ins

The Salt team can assist with regular check-ins for any questions that may arise or for quick sessions to explain something in more detail. We provide material that users can access afterwards, like one page quick starts, that can be kept by users as they work with the applications.

Online Learning

We also introduce users to online learning portals where they can benefit from free training provided by Microsoft, and can assess their own level of proficiency.
