To Whom It May Concern

Road Fund Administration will like to confirm that Salt Essential IT has hosted virtual training sessions with our employees, specifically around the Microsoft 365 applications and how they can be practically used to execute their duties, from the office or working remotely, from the browser or other devices.

The content of the sessions was relevant to the systems and interactions between our employees. The aim was to enable the digitization of traditional workflows and for end users to see the value in working in the new normal.

The explanation of the new norm of work and the importance of security and compliance, was refreshing. The trainer was practical, patient, and comfortable to demonstrate queries from the attendee's real time. It is a commendable value-added service from Salt, and we will be eager to pursue future trainings with Salt.

Dennis Shindume
