

User-Oriented Backup Process

The Shoviv Office 365 Backup tool has user-centric processing, and all its features are built by keeping this in the mind. It is designed to deliver the best Office 365 email backup and restore service. It easily backup Office 365 mailboxes to PST format that can be previewed in any Outlook version. Being an advanced backup and restore utility, it has all the advanced features which users can wish to backup Office 365 mailboxes.

Backup in PST File

To be convenient for each user is the all-time motive of this Office 365 email backup tool. As Microsoft doesn't guarantee and not responsible for the all-time security of Office 365 mailboxes, so most of the user always looks to have a backup Office 365 mailboxes to PST file. The best part is, the software allows to do so because PST file has its advantages like it is easily portable and accessible in Outlook.

Backup Archive mailboxes

Although Microsoft Office 365 delivers the features to Archive the emails online (in-place Archive) as well as cares about the data security but still have a backup of Archive Mailboxes is very important. In case of internet breakdown or if any employee leaves the organization and administration want to delete mailbox to cut Office 365 subscription cost and want to save data into in the local disk for offline archive, here need of backup rises. To eliminate these types of situations, the software provides a Backup Archive Mailboxes option.

Job-Based Backup Process (Easy Backup process), One Time Process /Once Connection

No one wants to get in trouble and hurdles, and repeating tasks always leads to bad experiences; Shoviv knows this. To make the Office 365 email backup process handy and enhance the working experience, this software offers many helpful features such as: Users do not need to make the connection all-time for creating and running jobs. You only need to make a connection once. and you can run the
