Levels of Customer engagement	<ul style="list-style-type: none"> Participate on the Kick-off call 	<ul style="list-style-type: none"> Assist the partner to access customer environment/ deliver AX model store Fill in Microsoft Dynamics 365 upgrade questionnaire form 	<ul style="list-style-type: none"> Assist the partner to gather information about the business process Give feedback on questions on why/how 	<ul style="list-style-type: none"> Participate on the final presentation Provide feedback and share expectations on next steps 	

While we perform the assessment over the course of **4-6 weeks**, your total time commitment should fall **between 3-5 workdays**. Can be delivered in on/offsite manner. Expenses are covered by Microsoft & Columbus

Deliverables of Standard AMA:

Functional Assessment

Your business processes may have changed over the lifecycle of Dynamics on-premises deployment, and they might not be the best fit for an online deployment. This analysis drills into the important functional requirements and re-evaluates them with best practices and recommendations for Dynamics 365

Technical Assessment

Assessment includes: Technical analysis of the AX environment, level of customizations and their complexity and pathway for migration. In addition: recommendations towards new available functionalities, complexity of migration, ways to get the same functionalities through work arounds

Integration Options

Existing integrations running on-premises may no longer be needed or run when migrating to the cloud. The goal of the analysis is to assess those existing integrations for cloud compatibility, security, technical feasibility, and performance

Migration Plan

Helps to understand what a future state deployment might look like and produce a high-level system blueprint. This might include items such as conceptual solution architecture, high level gap-fit by business processes, integration strategy, data migration strategy and/or deployment strategy

Reporting

This item makes recommendations on reporting options for Dynamics 365. Examples include detailed reporting and BI assessment broken down by – operation reporting, financial reporting, business document reporting, analytical reporting etc

Recommendation and approach

A summary view of what would be the best course of action to help you move to cloud and the pathway that would work best for you and your business, depending on complexity, and impact analysis

Additional options upon agreement:

Business Value Analysis (BVA)

Helps to understand the total economic impact of moving to the cloud. Performing a BVA will help to align migration efforts with business outcomes, uncover potential cost-savings and productivity gains establishing a compelling economic reason to migrate to the cloud

Deprecation plan

Deprecation planning assesses those key items that will be affected going to the cloud and offers recommendations, best practices and alternative solutions that a customer should consider

Envisioning

A design thinking workshop can help to generate ideas, ensure all the key stakeholders on the migration project are heard, form a prioritized list of requirements that can be used in the design and help shape future phases of digital transformation

Industry accelerators

Microsoft industry accelerators/3rd party templates can help with time to value on Dynamics 365 cloud migrations. If there is a particular vertical solution that addresses a known functionality gap, then this analysis can help in exploring potential use case scenarios post migration

Industry best practices

Based on the results of the assessment, there may be specific areas which warrant further response, this item is an opportunity to expand on industry best practices, especially as it relates to functional and technical elements of Dynamics 365

Proof of Concept

Helps to build a prototype to showcase the benefits of specific set of cloud solutions and how that benefits business in real time

Sample of assessment report

1. Customization assessment

The following analysis was made based on the upgrade information and solution objects supplied by the customer

1.1. Executive Summary

The customer currently deploys 2 on-prem instances of AX2012 solution to manage their business. Microsoft is evaluating upgrading their current solution to later Dynamics 365 for Finance & SCM. Hence, Microsoft conducted a short transition assessment based on the initial agreed plan of technical upgrade (fit and shift model). This will help the customer to understand the complexity/effort involved and assist in making right architectural choices for a smooth transition.

Any major risks have been identified as a part of the technical fit and shift, however several risks related to data upgrade and ISVs have been observed and identified below in section.

1.2. Risks

- ISV - Availability in Dynamics 365 for Finance & SCM
- Localization - Availability in Dynamics 365 for Finance & SCM
- Synchronous integration - redesign synchronous integration approach in the cloud
- Extensions - highly customized solution, moving over layering customization to extensions is challenging
- Data Upgrade - Considering the size of database, in place data upgrade requires multiple rounds of iterations.

1.3. Current system information/Build version

Instance 1:	
System Information	Details
Microsoft Dynamics AX version	AX2012 R3 CU 8
Database server type and version	SQL Server 2012 R2
Database user (SS) ID	SQL
Database collation	Latin1_General_CI_AS
Virtual company used?	No
Data partitioning used?	Use default single partition
Attachment storage	Database file server
Number of Legal Entities	40
Location	Latin US, serving North American region

Instance 2:	
System Information	Details
Microsoft Dynamics AX version	AX2012 R3 CU 8
Database server type and version	SQL Server 2012 R2
Database user (SS) ID	SQL
Database collation	Latin1_General_CI_AS
Virtual company used?	No

Data partitioning used?	Use default single partition
Attachment storage	Database file server
Number of Legal Entities	40
Location	Latin US, serving North American region

All instances are running same codebase of Dynamics AX application.

1.4. Models installed

Model	Layer	Model name	Model publisher	Version	Signed	Model description
2608	ISV	DemandForecasting	Faragati	6.2.0.0	Yes	Demand Forecasting by Faragati Solutions Ltd.
2572	ISV	BC	ALTRIASTE	0.0.104.1	No	AX2012R3 ROMANIA Localization
2571	ISV	HR Localization	IN2	1.0.0.0	No	
2570	ISV	Localization	PT5	1.0.0.0	No	BC Localization
1809	ISV	ProdLabels	ProdLabel	2.1.0.0.2	Yes	ProdLabel Tools
1808	ISV	ProdLicenses	ProdLabel	2.1.0.0.2	Yes	ProdLabel Licenses
1807	ISV	ProdLabels	ProdLabel	2.1.0.0.2	Yes	ProdLabel Labels
1805	ISV	ProdLabels	ProdLabel	1.0.0.0	No	ProdLabel Export Labels
1884	ISV	confiCUB	AVANADE	1.7.0.0	Yes	Model for FIM Add-on upgrade to AX2012 R3 CU8
1883	ISV	AX2012Update	AX2012	3.18.0.145	Yes	AX2012 ECM - Update
25	ISV	AX2012ERP	AX2012	3.18.0.145	Yes	Enterprise Portal
29	ISV	AX2012	AX2012	3.18.0.145	Yes	Process Processing
28	ISV	AX2012	AX2012	3.18.0.145	Yes	AX2012 ECM
23	ISV	AX2012	AX2012	1.2.0.100	Yes	AX2012 Framework
24	ISV	AX2012	AX2012	1.0.0.0	Yes	AX2012 Labels
15	ISV	USR Model		1.0.0.0	No	System generated model for USR layer for Microsoft Dynamics AX
13	ISV	CLS Model		1.0.0.0	No	System generated model for CLS layer for Microsoft Dynamics AX

Based on above model information, it's recommended that:

- ISV layer - there are 11 models installed from various ISV partners, confirm ISV solution readiness in Dynamics 365 F&O packages.
- USR layer - there are 3 models installed for Romania, Croatia, and Bulgaria localizations from partners.
- CLS layer - there are 3 models installed in CLS layer where most of the customization done for the customer. CUSLXEDLabels. These models are considered for code upgrade.
- USR layer - there are 1 model installed in USR layer where small amount of customization done for the customer (USR). This model is considered for code upgrade.

1.5. Modification level

The Customer's solution Assessment uncovered the following modified objects versus a standard version of Microsoft Dynamics AX 2012:

Application Object Type	Customized Objects	Complexity Level	Small	Medium	Large	Not in	New Objects
Tables	238	98	34	9	57	1038	
Views	19	4	3	12	11		
Forms	69	1	61	7	26		
Extended Data Types	30	1	27	2	142		
Base Enums	19	2	4	13	20		
Custom Code						4	
Configuration Keys						35	
Security Keys						17	
Permissions	1				1	8	
Messages	8				6	47	
Classes	456	23	10	29	191	8814	
Forms	132	51	24	14	63	607	
Table Parts	1				1	11	
Form Parts						11	
Cues						155	
Code Groups						60	
Data Sets	4				4	95	
SSRS Reports	30		27	3	3	51	
Queries	12	3	2	7	7	66	
Menus	13	2	2	1	8	12	
Menu Items Display	3				3	691	
Menu Items Output						81	
Menu Items Action	1		1			546	
Services	2				2	137	
Service Groups						9	
Code Permissions	1				1	1	
Isdms	11	12	7		2	1863	
Diodes	11	10			1	340	
Tables	6	6				140	
Process Cycles	1				1	1	
Profiles	2		2			4	
Resources						18	
Label Files						10	
References						4	
Total	1,180	213	292	55		16,118	

Table 1: Customer's Solution Modification Assessment

Complexity level

Figure 1 shows the percentage of objects by complexity level: large, medium, and small objects.

After analyzing customer's model store using LCS code upgrade service, below is the breakdown of number of objects:

2. Migration assessments

Following section describes high-level assessment as compared to Finance and Operations

2.1 Solution overview

Customer XYZ produces animal feeds for all different type of animal and all different type of feeds. Feed is low margin business. Pricing is key. Lots of commodity goes in the feed. Pricing is calculated weekly. Commodity pricing > bestprice > formula > production line. Lots of business to distributor and farmers. Feeder finance. Feed as credit from distributor.

Process manufacturing - used formulas to create feeds - feeds made of 5 to 25 items. Commodities, vitamins etc. Bestprice as formulation software. Create formula > pass it as > pass to mfg. P&L for individual plant to major plans, Critical to control cost and pricing. Freight charges passed to clients. Food quality safety. Detailed quality assurance. Most of the outside. Lab testing is external. Lab is custom module.

One instance of AX 2012 R3 - used by 30 production facility in north America. Following modules/business processes used:
1. Production
2. MRP
3. AR
4. AP
5. GL
6. Rebate
7. Pricing
8. Agreement is updated from pricing

They have 30 legal entities, with 10 operational entities and 20 financial legal entities.

2.2 ISV Solution Overview

Customer is currently using following ISV solutions.

ISV Name	Purpose	F&O need/availability assessment

2.3 Localizations Solution Overview

Customer is currently using following partner localization solutions.

Localization Name	Purpose	F&O need/availability assessment

2.4 Customization assessments

Category	Assessment	Comments/Risk
General	Heavy customization in Sales and Marketing, Inventory management and Production module.	Plan for detailed test plan and test cases. Automated testing using RSAT.
General	Heavy intensive customization in Production module.	Potential of high number of extension request or redesign.
Replace with OOB Feature	Customization related to custom mobile device can be replaced with Advance warehouse management capability in F&O.	Evaluate OOB feature in detail and plan for user training.
Replace with OOB Feature	Customization done in to handle credit management can be replaced with OOB credit management module features.	Evaluate OOB feature in detail and plan for user training.
Re-Implementation	Custom feature developed for sales order processing needs to be re-designed to consider new Advance warehouse flow.	
Re-Implementation	Infrastructure Code SalesOrder, InventorySegmentGroup, InventorySubSegmentGroup, InventorySubSegmentGroup tables were converted not to share per company. This is has to be re-designed.	
Deprecated Features	Enterprise portal is used for purchase requisition entry and approval - All customization can be safely removed.	Evaluate OOB functionality

2.5 Forms Refactoring

There are 176 newly created forms in custom model which are migrated from AX2012 to D365 Finance and Operations and the pattern is missing. From patterns must be applied to each form to remove the conflict.

2.6 Integration assessments

There are major differences in integration technologies between AX2012 R3 and MS Dynamics 365 F&O systems. For this reason, existing integrations must be analyzed and possible solutions for existing integrations must be discussed.

Customer has provided a list of existing AX2012 integrations that are used in current system. Possible solutions for existing integration migrations to the new system have been discussed.

Benefits of Advanced Migration Assessment

**Helps to identify
best action
plan to migrate to
cloud
& saves time**

**Diagnoses functional
and technical gaps &
provides
recommendations
for the future**

**Ensures
migration readiness
& determines how
to best handle
customizations and
data**

**Eliminates risks
at the early
stages**

**Free from
upfront financial
commitment or
obligations**
