YOUR CLOUD - FASTER, MORE EFFICIENT, MORE SECURE.

Your journey to the cloud needs to be strategic, organized, intentional, and efficient. Disruption of business due to cloud migration is unnecessary and avoidable - ensuring your organization progresses successfully through your journey to the cloud is essential.

Azure Foundations by Long View is Step 1 in a 3-step program designed by industry-leading cloud experts to ensure that your business moves throughout your cloud journey in the smoothest, most efficient and productive way possible. With over 800 Microsoft Certified employees, we have the expertise and experience to guide your Organization's cloud adoption.

AZURE FOUNDATIONS - STEP 1

Long View Azure Foundations provides architectural input and trusted advice on properly defining, adopting and further integrating Azure into your existing environment, processes, policies and procedures. As the first of three steps, the purpose of Long View Azure Foundations is to accelerate your Cloud Adoption to ensure that your organization is setup with the right access, security and foundational components specific to your business needs.

The Long View Azure Foundations program delivers a base for your cloud adoption in manageable stages and provides structure for more permanent systems to be applied to the right functions. A set of flexible controls and Azure capabilities provide organization and structure to your overall environment, and ensures that services built on the public cloud are delivered appropriately. Azure Foundations gives both IT and business groups a pattern to create, attach and adopt new services or a functional "how to" to approach new technology and services delivered from a public cloud.
