

Scantron Technology Solutions' Azure Migration Assessment solution provides a cost-effective cloud readiness assessment and migration process for small to medium size businesses. Leveraging Azure Migrate, Scantron Technology Solutions (STS) will provide an assessment of a company's network environment and cloud migration consultation while identifying applications and data that can be migrated to Azure without impacting business performance or customer experience.

STS's Azure Migration Assessment will modernize your IT environment allowing your employees to be productive from anywhere and work efficiently from any device.

The STS Azure Migrate review includes:

- **Network Assessment** – Perform a thorough review of firewalls, routers and switches including configuration of VPNs, data encryption and SSL as needed to optimize these tools
- **Application Review** - find opportunities to migrate application workload, recommend ways to virtualize or use SaaS to simplify remote access and resolve remote access issues
- **Security Check** – Confirm security services, Microsoft Defender, Microsoft MFA, drive encryption via Microsoft bit locker, are activated
- **Data /Storage Review** – review current performance issues and identify assets for migration to Azure, SharePoint or OneDrive
- **Hardware and Operating Systems** –ensure hardware operating systems and hypervisors are currently supported
- **Backups/ BCDR** - evaluate for cloud recovery service, disaster recovery and business continuity
- **Collaboration Tools**: Implement best practices for remote workforce productivity via Teams and Teams calling

This includes 8 hours of consultation and 4 hours of engineering, including a Design document and migration plan from assessment results. Customer will be provided a quote for suggested environment improvements.

STS superior ability to implement complete solutions for all required projects via our:

- **Network Operations Center**
- **Nationwide field service team**
- **Focused Security team**
- **Network monitoring processes**
