DATA FACTORY MIGRATION WITH AZURE - ASSESSMENT

We will assist you with moving and transforming data utilizing pattern-based automation, allowing you to speed the process while reducing the dangers associated with a manual conversion.

Many organizations struggle with importing big amounts of data into the cloud from many sources. As a result, employing Azure data factory is the best option for managing your migration data. It enables you to combine data from numerous sources using a single tool.

DATA FACTORY MIGRATION ASSESSMENT STEPS

AZURE DATA FACTORY CONCEPTS

HOW WE WILL DO THE MIGRATION

- We will use pipelines for copying
- The copying will be done in batches
- Data factory can be used also for ongoing data flows

BENEFITS

- A single tool for working with integrations
- Scalability
- Process monitoring
- Saving resources

This free session will be used to agree on the precise duration, price, and scope of the Project.
