# BEYOND Fields extends more than 400 Microsoft Dynamics 365 Business Central Pages with standard fields

BEYOND Fields automatically adds additional field information into the most important cards and lists

Name 2

To enter the company name, one field might not be sufficient. Accordingly, the name is continued in the "Name 2" field and often used as a reference. Through this extension, the information is displayed in all important pages/documents.

Description 2

The description of an item often does not fit into only one field. For this, "Description 2" is needed, but this standard field is not displayed everywhere. With the help of this extension, this problem belongs to the past.

Bin Code

If a company works with a warehouse management, the "bin code" field is an important part of a business day. Roles and special pages no longer need to be manually customized to add this information.

Additional Fields

Many additional fields like "Address 2", "Sell-to Name 2", "Buy-from Name 2" and "Ship-to Name 2" are implemented by BEYOND Fields and do not need to be displayed/added manually.
