

# The last security check before 'that' email destroys your business

About MailGuard 365:

A brand-new evolutionary approach to email security, MailGuard 365 is exclusive to the Microsoft Marketplace. It is a cloud-based email security solution made better together by our collaboration with Microsoft to meet the needs of Microsoft 365 users. MailGuard 365 combines 20+ years of specialized email security expertise and IP from MailGuard, with the best of Microsoft Azure and ML/ AI.

## STOP UP TO 15% MORE EMAIL THREATS WITH MICROSOFT 365

### Single-click activation

Activate enterprise-wide protection within a minute. No download required as MailGuard 365 is built on Microsoft Azure and is activated in the Microsoft marketplace with your Microsoft credentials. Your organization can get started with a single click, stopping advanced criminal intent email threats immediately.

### Stop criminal intent emails

Traditional email security works on the outside, with an MX-record change. MailGuard 365 takes a new and evolutionary approach, working on the inside of Microsoft 365, re-scanning emails when they reach an inbox, identifying and stopping email threats like phishing, spear phishing, ransomware and CEO Fraud (BEC) attacks.

### No end-user training

Designed to provide peace of mind for your end-users and your IT admins, MailGuard 365 works within the native Microsoft 365 environment with no set-up headaches or journaling to configure. Just like with M365, threats are instantly moved to users' junk and deleted items folders, so no additional training is required.

### Evidence-based reporting

Complementing upstream security services like the Microsoft 365 security stack and other third-party email security vendors, MailGuard 365 takes a new approach. This means it is last to inspect emails, allowing for world first evidence-based reporting that demonstrates its stopping power.

## WHAT CUSTOMERS ARE SAYING

*"Since implementing MailGuard 365 everything just runs itself. Set up was easy and we get daily reports showing what threats are being picked up. This gives us peace of mind that it's doing its job and that we're covered. I highly recommend MailGuard 365 to any organization that wants ultimate protection of their Microsoft 365 inboxes. It's reliable, great value for money and their service is top-notch, doesn't matter where you are in the world!"*

# MailGuard 365

A brand-new, evolutionary approach that is collaborative by design, MailGuard 365 re-scans for new criminal intent threats, inspecting email records after they have passed through your Microsoft 365 security stack and any other third-party email security vendors. This enables evidence-based reporting, demonstrating the additional threats stopped to protect your business.

## IDENTIFIES AND STOPS HARMFUL EMAIL THREATS

### PHISHING

Protect your data, passwords, banking and other sensitive credentials that are the target of attacks by cybercriminals.

### CEO FRAUD (BEC)

Stop targeted attacks impersonating C-level leaders and other people of influence within your organization.

### RANSOMWARE

Malicious payloads can prevent access to systems and data, demanding ransom payments in return for decryption.

### SPEAR PHISHING

Targeting key individuals, cybercriminals use social engineering to design fraudulent emails aimed at extracting sensitive information and funds.

## WHY MAILGUARD 365?

Phishing, Ransomware, BEC – are things we never want to personally experience, but we hear reports everyday of email threats devastating businesses. Microsoft 365 users are prime targets, and MailGuard 365 makes life safer and easier for businesses and their users. It's the last check before your staff could make a catastrophic mistake.

### ACCELERATED PROTECTION

Speed is the new currency, and MailGuard 365 leads the market by stopping threats ahead of rivals. MailGuard 365 leverages 20+ years of specialized IP from MailGuard, stopping advanced criminal intent email threats like phishing, CEO fraud and ransomware.

### MULTI-LAYERED PROTECTION

Experts agree that a multi-layered approach to email security is required. Gartner reports that '35% of client organizations that move to Microsoft 365 are supplementing its natively

available email security capabilities with a third-party product.' With its unique inside Microsoft 365 approach, MailGuard 365 allows organizations to take advantage of upstream solutions, like the Microsoft security stack or third-party vendors, with the added power of a specialist email solution re-scanning email as a last security check.

### EVIDENCE-BASED REPORTING

Its unique architecture enables compelling evidence-based reporting demonstrating the stopping power of MailGuard 365, and the additional threats that have been defended.

### EASY FOR USERS AND ADMINS

Operating natively in stealth within the Microsoft 365 environment, means there is no training required for end-users, and getting started for admins is super simple, with just a single click.
