

Title : Azure Stack HCI Migration Assessment Service

Service Type : Assessment

Solution Areas :

1. Workload migration
 - a. Compute
 - b. Network
 - c. Storage

Industries :

1. Manufacturing
2. Government
3. Financial services
4. Education
5. Communications
6. Software development
7. System integration

Country/Region : Malaysia

In today's IT landscape, frequent adoption of new applications is a common sight. For this there is more demand for flexibility, scalability, and agility. Unfortunately, today's traditional three-tier infrastructure simply can't support such newer demands. This in turn drives more IT organizations towards hyperconverged infrastructure (HCI) to meet these needs and reap the benefits of a hybrid cloud platform.

The transition to HCI may be faced with various potential challenges, such as:

- Determining how to build an ideal infrastructure to suit ever-changing business needs.
- Consolidating and integrating components on a consistent infrastructure with common operations.
- Virtualizing and automating the full stack, including the HCI infrastructure layer and the cloud software stack.
- Designing a transition plan to avoid downtime, minimize cost, and leverage existing skill sets.

To achieve all these is no small task. But with the right approach, it can be a smooth, efficient process that results in an infrastructure that meets your needs today and tomorrow. With Cloudify Asia's Azure Stack HCI Migration Assessment Service, we will provide consultation and assessment towards client's IT and applications environment and business use cases.

Key deliverables include:

1. Readiness report for Azure Stack HCI migrations
2. HCI target deployment model recommendation
3. Project's ROI and TCO

Who is Cloudify Asia?

We are cloud professionals that provide the right cloud foundation and services for business growth, through managed cloud native platform, consultancy, and subscription model.
