An objective, data driven analysis that prepares you for a successful Azure migration.

OAKWOOD

APPLICATION MIGRATION STRATEGY & ROADMAP PLANNING

www.oakwoodsys.com

MOVING TO THE CLOUD WITH CERTAINTY.

Organizations today are looking at the migration of on-premises applications and data from their local data center to the cloud to take advantage of benefits such as reduced infrastructure costs, scalability, data security, ease of accessibility and more.

However, it takes years of experience to understand the advantages and disadvantages to various migration methods. It is vital that the chosen method align with your business objectives and the realities of their current-state deployment.

At Oakwood, our goal is to offer clarity and aid in your unique migration effort by providing an objective, data-driven analysis to identify endpoint suitability and application migration patterns.

Our proven approach and processes ensures that our clients know which applications are most appropriate for Azure; understand migration priorities; select the appropriate migration pattern for each application; and develop the most practical roadmap for a successful Azure migration.
