

Microsoft Sentinel Workshop

Gain a bird's eye view across your enterprise with Security Information & Events Management (SIEM) for a modern world

Partner-led workshop highlights:

Understand the features and benefits of Microsoft Sentinel

Gain visibility into threats across email, identity, and data

Better understand, prioritise, and mitigate potential threat vectors

Create a defined deployment roadmap based on your environment and goals

Develop joint plans and next steps

"With everything running through Microsoft Sentinel, we've reduced the time spent on case management and resolution of alerts by approximately 50 percent"

-Stuart Gregg, Cyber Security Operations Lead, ASOS

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges—let alone tomorrow's unimagined risks.

That's why Microsoft developed Microsoft Sentinel, a fully cloud-native SIEM.

See and stop threats before they cause harm with a Microsoft Sentinel Workshop

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Microsoft Sentinel along with insights on active threats to your Microsoft 365 cloud and on-premises environments with a Microsoft Sentinel Workshop.

Choose the approach that's best for you

Every organisation is different, so this workshop can be customised to fit your environment and goals. We can provide either of two scenarios:

Remote monitoring

If your organisation doesn't have its own security operations center (SOC) or if you want to offload some monitoring tasks, we will demonstrate how a partner can perform remote monitoring and threat hunting for you.

Joint threat exploration

If your organisation is interested in learning how to integrate Microsoft Sentinel in your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed.

Workshop objectives

Through this partner-led workshop, we will work with you to:

- **Discover threats** to your Microsoft 365 cloud and on-premises environments across email, identity and data.
- **Understand how to mitigate threats** by showing how Microsoft 365 and Azure security products can help mitigate and protect against threats that are found.
- **Plan next steps** and provide information to build a business case for a production deployment of Microsoft Sentinel including a technical deployment roadmap.

In addition, depending on the selected scenario, you will also:

Experience the benefits of a managed SIEM with a true cloud native SIEM, managed and monitored by our cybersecurity experts.
(Remote Monitoring scenario)

Receive hands-on experience, learn how to discover and analyse threats using Microsoft Sentinel and how to automate your Security Operations to make it more effective.
(Joint Threat Exploration scenario)

What we'll do

Analyse your requirements and priorities for a SIEM deployment

Define scope & deploy Microsoft Sentinel in your production environment

Remote monitoring* and proactive threat hunting to discover attack indicators
*optional component

Discover threats and demonstrate how to automate responses

Recommend next steps on how to proceed with a production implementation of Microsoft Sentinel
