

Okta to Azure Active Directory Migration

Netwoven's Okta to Azure AD migration solution offers a unified identity platform, providing your people, partners, & customers a single identity to access the applications they want & collaborate from any platform & device.

According to the Zero Trust Progress report 2020, over 45% IT leaders are concerned about public cloud application access security, and 70% of organizations plan to advance their identity and access management capabilities.

Complex mix of siloed, single-point security solutions like Okta are time-consuming to deploy and inevitably lead to a patchwork of consoles and reports that are difficult to monitor and manage across the enterprise. Netwoven's Okta to Azure AD migration solution offers best-of-breed security and best of integration across the portfolio that is validated by customer evidence and industry leaders. We focus on offering our customers the ROI they need in these times of economic uncertainty.

Reduce costs & risks with a consolidated security stack

- ✔ Streamlines security by eliminating the complexity of integrating & managing multiple disparate security solutions
- ✔ Microsoft 365 E5 Security can reduce costs by up to 60%
- ✔ Microsoft named a leader in five Gartner Magic Quadrants, including Identity and Access Management
- ✔ Member of Microsoft Intelligent Security Association (MISA)

Seamless user experiences

- ✔ Microsoft EM+S delivers a superior end-user experience and value than Okta
- ✔ Compatible with third party applications, helping you optimize the processes and increase productivity
- ✔ Everything your business needs with just one license
- ✔ Scalability and reliability with ever-expanding array of features & functionality for robust identity management & security

Simplified access governance

- ✔ Consolidation of up to 40 security products
- ✔ Thousands of Pre-integrated third-party applications in the Azure AD application gallery
- ✔ Wide range of features such as Conditional Access, Multi Factor Authentication, Threat Detection, privileged Identity Management, & much more.
