

Microsoft System Center Endpoint Manager – Quick Start

Microsoft System Center Endpoint Manager (SCEM) provides a comprehensive solution for change and configuration management. Yorktel provides experts in designing, building and implementing SCEM solutions and services so you can perform tasks such as the following:

- Deploy operating systems, software applications, and software updates
- Monitor and remediate computers for compliance settings
- Monitor hardware and software inventory
- Remotely administer computers

SCEM can help you:

- Increase IT productivity and efficiency by reducing manual tasks and letting you focus on high-value projects
- Maximize hardware and software investments
- Empower end-user productivity by providing the right software at the right time
- Reduce your administrative overhead and total cost of ownership
- Deliver more effective IT services by enabling:
 - Secure and scalable software deployment
 - Compliance settings management
 - Comprehensive asset management of servers, desktops, laptops, and mobile devices

Our Delivery Approach

To be successful with Endpoint Manager, you must first thoroughly plan and test the management features before you use Endpoint Manager in a production environment. As a powerful management application, Endpoint Manager has the potential to affect every computer in your organization. When you deploy and manage Endpoint Manager with careful planning and consideration of your business requirements, Endpoint Manager can reduce your administrative overhead and total cost of ownership. Yorktel uses the following model for deploying SCEM:

- **Envision** - Identify what needs to be accomplished and any constraints
- **Plan** - Plan and design a solution to meet the needs and expectations within those constraints
- **Build** - Build the solution
- **Stabilize** - Validate that the solution meets the needs and expectations... “synch and stabilize”
- **Deploy** - Deploy the solution

New Features of SCEM:

- ✓ Natively manage Office 365 desktop client update
- ✓ Windows 10 in-place upgrade task sequence
- ✓ Preferred management points
- ✓ Support for Microsoft Azure virtual machines
- ✓ Single Primary site supports up to 150k clients and 700k client in a hierarchy
- ✓ Support for SQL Server Always-On for highly available databases

Microsoft System Center Endpoint Manager – Quick Start

Yorktel's Quick Start Delivery Service

The 40-hour Quick Start provides for the following:

- One-Day envisioning plan and design session
- Documented design plan
- Deployment of the Primary Site Server with SQL
- Deployment of one Distribution Point
- Pre-defined collections for Operating Systems and Client Status
- Reports for Hardware/Software Inventory
- Deployment of the SCEM client to 20 End-Points
- As-built documentation

NOTE: Customer to provide physical or virtual server and software licensing. Requires Windows Server 2016 and SQL 2016
