- **Exposure** of privileged accounts.
- Lack of **Control** accessing apps across a hybrid environment.
- Difficulties **Managing** the identity of employees, partners and customers.
- **Time** wasted managing passwords.
- Discover and control the use of **Shadow IT**.

Benefits you will find

- **Best Practices** in Office 365/Azure in terms of **Security** and **Governance**.
- Identity and Access **Lifecycle Management**.
- **Reduce the Risk** of phishing, apps and password attacks.
- **Centralized** and more efficient identity management.
- Control access based on organizational and regulatory **Policies**.

Identity

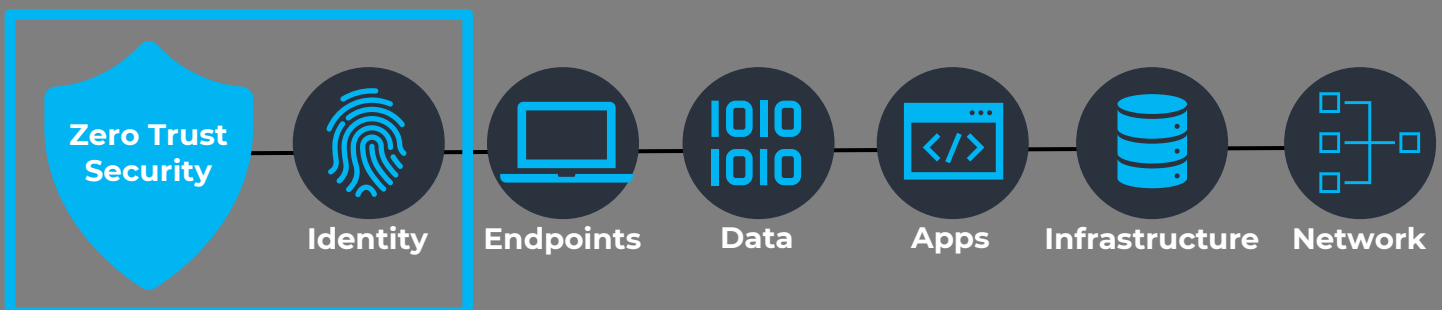

Governance

Security

2 Weeks

Our approach in six phases

in two weeks

1

Licensing Compliance

The tenant's licensing will be reviewed to ensure that it is optimal and assigned correctly.

2

Security Review

Review of Microsoft's best practices in security of the tenant, verifying the use of MFA, Conditional Access, PIM, SSPR, Privileged Identities, external access, access reviews and Microsoft Defender.

3

Identity Analysis

Analysis of identity models, synchronization status, user and group configuration, ADFS, ADConnect.

4

Governance Guidance

Azure Active Directory Identity Governance increases users' productivity by making it easier to request access to apps, groups, and Microsoft Teams in one access package.

5

Analysis of Tenant's Main Services

Review of the configuration of the main services - Exchange, Sharepoint, OneDrive and Teams.

6

Conclusions and Recommendations

We will document our recommendations and outline timeline and steps to increase your level of early detection and reduce vulnerabilities.
