

# Azure Cost Analysis

Insight Technology Solutions

## Discover Azure actual costs and potential savings.

The main goal of the Insight analysis is to discover the actual costs and potential savings in the organization's Azure environment.

Organizations like yours manage large and complex cloud infrastructures, while grappling with tight budgets. In this environment, minimizing costs is a huge challenge. You'll be able to identify quick savings targets and discover potential optimizations without sacrificing service level using Insight's Azure Cost Analysis.

Designed for IT teams in charge of Cloud management and focused on detail and centralized control, Azure Cost Analysis will help you develop a strategic plan for savings, optimization and securitization based on the recommendations of Cost Management and Azure Advisor of Microsoft, don't just get visibility into your cloud costs; you'll get a valuable source of possible enhancements and optimizations to promote savings and improve security.

## Key aspects of Azure Cost Analysis

Pull information directly from different Azure APIs and Graph REST. Presents information in a simplified format for tracking possible recommendations from Azure Advisor or Azure Security Center, allowing you to filter by subscriptions, resource groups, tags, or particular resources.

## Why do a cost analysis?

Given the volume and complexity of cloud infrastructures, it is essential to understand the cost of your organization and how to control it. Through this analysis, you will be able to:

- Track resource usage and manage Microsoft cloud costs with a single, unified view for comprehensive financial and operational insights to help you make informed decisions.
- Design governance policies for effective enterprise cloud cost management and increased reliability with budgeting, cost allocation, and overrides.
- Increase the return on your cloud investment using ongoing cost optimization and industry best practices.
