With Serverless360

What outcomes do we drive?

Achieve Advanced Observability

From operation friendly view to monitor any issues and fixing the same, everything lives on Serverless360.

Remediate with Distributed Tracing

Enterprise grade functional end-to-end tracing and monitoring for business process flow across services.

Turn Data to actionable Insights

Uncover new insights on Azure subscription, answer more questions, and make better decisions to avoid cost spiral up.

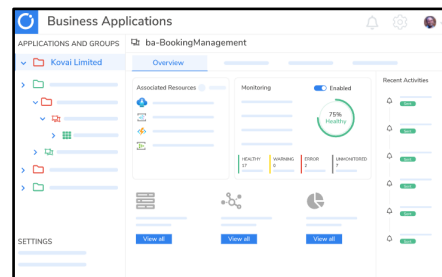

Propel Developer productivity

Empower Azure developers to move at the speed of business using a single cross-platform desktop tool.

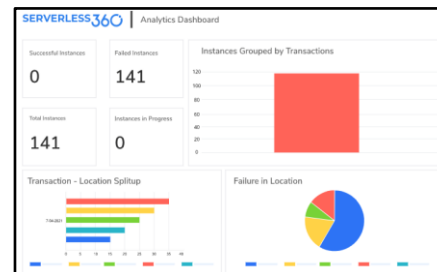

Reduce Total Cost of Ownership

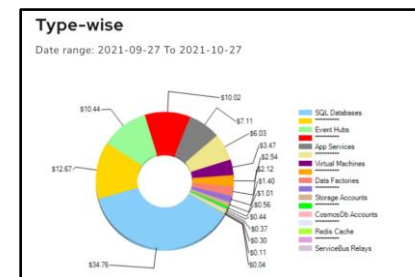

Offload support tasks to the Operations team and allow the Azure experts to innovate, reduce the TCO on Azure application.

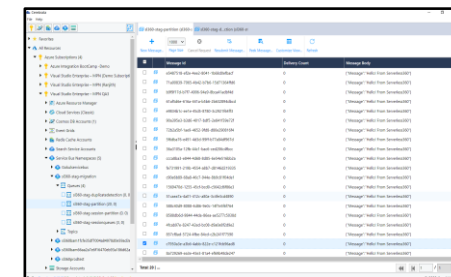

Business Applications for Azure Operation Team

Business Activity Monitoring for Business Users

Azure Documenter for the Management Team

Cerebrata for Azure Developers

Is Serverless360 a vitamin or painkiller?

Why not general-purpose monitoring tool?

Lack of deeper management or monitoring option

Not primarily designed for Azure resources in mind

Why not a custom script?

Works temporarily but cannot scale with the business needs.

Involving Azure experts and developers in maintaining and enhancing the scripts who can be used for other productive business projects.
