Highly Secure and Scalable

Always Accessible Accounts

Keep Up With Your Accounts From Anywhere At Any Time At Your Convenience.

Tally on Azure is a service carefully crafted to enable businesses to take control of their accounts from anywhere using the device of your liking with the ultimate security provided by Azure.

**An incredibly
rich set of
FEATURES**

02

Notable Feature 1

“Seamless logging into your cloud hosted Tally.”

The process of opening your Tally is as smooth as opening it into your local device. If not explicitly informed, a user might not even get the hint that the system is running on cloud.

1

Notable Feature 2

“Bill as per real usage
by the hour.

The dedicated servers running your Tally are billed as per the hour of your usage. If you want to use it 9AM to 6PM you will be billed for those 9 hours in a day.

2

Notable Feature 3

“Best in class security for your work in cloud.”

Utilize the most advanced security tools and standards already implemented in world leading datacenters to ensure your work is always secure.

Benefits

03

A quick glance over the multitude of benefits that Tally running on Azure brings forth.

Anywhere or Any Device

Hosted on Azure, running on premium Microsoft Azure infra, Tally is always accessible to you from anywhere on the globe, all you need is a device connected with the internet.

One-Click Accessibility

The solution takes you to your Tally on cloud with just a single click on your desktop icon. Users won't even know that they are using Tally on cloud.

Save Cost with PAYG

With Tally on Azure, you are offered cost-saving benefits by paying for what you use. Pay as you go billing model lets you pay for the minutes you have used your Tally servers.

Highly Secure & Scalable

A highly secured infrastructure that lets you scale the resources with the utmost ease. Setup more users within minutes as your company grows.

Use Cases

04

Know the practical uses of a practical solution.

Multi Branch Consolidation

Consolidation of Tally spread across multiple branches can be a tiring process. With a singular hosted location that is accessible from anywhere with any permitted device all the data and ledgers are already consolidated in one place.

Local Infra disruption

Access to the accounts is way too important to be disrupted by local IT-related issues that arise every day. We cannot afford to have our accounts shut down for an indefinite amount of time, that's where the power of the cloud comes in to save the day. With the migration to Azure, you can have as much as 99.99% guaranteed availability to your accounts.

Pricing – Let's work this out.

Even though the final pricing can only be found out after listening to your unique requirement. Following are the fundamental components that contribute to your monthly bill.

VMs selected as per the usage.

Backup for backing up user's tally data.

Networking for nicely architected design.

RDS CAL license for remote access.

Other components may be configured solely as per your approved design.
