It is time for Digital Transformation...
IT IS TIME FOR eBA®

eBA is an enterprise content management platform that is specifically made for your digital transformation evolution. eBA is your partner in your journey towards digital transformation. You can simplify your processes, be efficient and improve your bottomline with its agile workflow engine."

Workflow

eBA Workflow Management System is a process development platform that increases the profitability of corporations and enhances process oriented business insight by transferring processes to electronic automation rapidly and integrating them with other corporate applications.

We need workflow systems for the standardization, optimization, streamlining, and automation of corporate processes. Such systems enable management of documents and forms in electronic media by making them smart.

Document Management

Documents like spreadsheets, presentations, proposals, contracts, video and scanned images are created faster than we can count them. In most organizations, this content lives all over the place, on desktop computers, consumer file hosting services such as Dropbox and Google docs, network drives, USBs an email. And your enterprise applications such as ERP, CRM and Supply Chain are generating an endless stream of operational, structured data either on-premise or in the Cloud.

eBA® Modules

- Workflow
- Document Management
- Records Management
- Capture
- Dashboard

Document Management

Being able to organize, control and provide fast and secure access to this structured and unstructured data has become critical to the organization's success. eBA's simplified enterprise-grade document management system does exactly that. Key functionality includes version control, access control, notifications, approval workflows, embedded file viewer support, collaboration, and enterprise archiving.

Records Management

eBA Records Management allows the organization to comply with external regulations and internal policies by managing and automating the retention and removal of content.

Capture

With eBA Capture you can 'capture', digitize and interpret any type of document from any location, be it paper, email, image, fax, or EDI and regardless of whether that content is coming from a desktop, your ERP or other line-of-business application.

Dashboard

eBA Dashboard allows you to have visual reports as a result of your eBA activities. It has rich, useful and colorful visual reporting options for your choice.
