Application Modernization Assessment

Find the best way to migrate or modernize your apps

Microsoft Gold Partner

Aging systems and legacy applications prevent companies from fully taking advantage of today's customer-centric cloud technologies. 3Cloud's App Modernization Assessment (AMA) is the first step in the cloud adoption journey, designed to guide you through your cloud adoption from the beginning stages.

As digital disruptions lead to greater demands on IT systems and organizations, many companies are upgrading technologies to provide the best services to their end customers. We can help you identify and prioritize applications for modernization to Azure, thereby enhancing business agility and streamlining processes to meet current and future business objectives.

App Modernization is a migration approach designed to reduce the cost of operating the app without making significant architectural changes. The 3Cloud team will facilitate a workshop with your team to outline, plan and provide performance reporting, future state architecture diagrams, and timelines to implement migrations from legacy systems to Azure.

Benefits of Application Modernization with Azure:

- Reduce operational costs and reduce management overhead
- Improve developer productivity
- Scale based on user demand
- Take advantage of PaaS options like Azure App Services, Azure SQL Managed Instance, Azure Virtual Desktop, and more

Application Modernization Assessment Overview

Discover

- Review (or develop) the Cloud Strategy
- Data collection (Azure Migrate, Movere, etc.)
- Infrastructure discovery
- App Inventory

In this phase, we gather data on your current environment, including infrastructure and applications. We review your existing cloud strategy or help you get started on developing one.

Rationalize

- Incremental rationalization
- Program and initiative discovery
- App discovery
- App rationalization
- Financial analysis

Next, we rationalize your application portfolio by determining the best path for each application, whether that's rehosting, refactoring, or rearchitecting. This step includes an evaluation of the financial impact of app modernization.

Plan

- Migration backlog
- Timeline
- Effort
- Cost

Finally, we create a step-by-step plan for app modernization that includes timing, cost and level of effort.
