Access to high-value apps and resources
Microsoft Entra Verified ID

As the modern workplace evolves into a hybrid model, managing how and when mission-critical applications are accessed—as well as who has that access—has remained top of mind.

For many organizations, security concerns and compliance can either stifle the management conference. With Microsoft Entra Verified ID, you can provide secure, instant access to the applications and information your employees need by verifying and giving them control over their own digital identity.

Empower your people with Verified ID
As an organization issues a Verified ID to a worker without manual intervention, the system is designed for organizations to issue to valid employees, including temporary workers or partner organizations. With Microsoft Entra Verified ID, you can provide secure, instant access to the applications and information your employees need by verifying and giving them control over their own digital identity.

Workplace applications:
- With workplace credentials, a verified employee can securely access customer databases, sales metrics, customer relationship management systems, and more.
- With workplace credentials, partners and contractors can be issued credentials that allow them to easily access the resources they need.

Business-to-business (B2B) access:
- Organizations can allow verified employees from other organizations to access high-value applications without establishing and maintaining individual federations.

Enable the right level of access for the right users
With the worldwide adoption of remote and hybrid working environments, a solution is needed that allows organizations to issue and verify digital identities easily—and not just the digital identities of their employees, but that of temporary workers or partner organizations. Microsoft Entra Verified ID provides easy-to-use issuing and verification of digital identities, supported by a fabric of trusted partners, so you can:

- Verify temporary workers and employee credentials:
  You can verify the credentials of partners, contractors, gig workers, and employees with ease enabling the complexity and hassle of managing multiple accounts.

- Integrate with existing Enterprise Management in Azure Active Directory:
  With minimal set-up time required, Verified ID can effortlessly be integrated with your existing on-premises infrastructure.

- Secure workflows for external access to resources:
  Easy-to-use solutions can fit in the flow of your work, simplifying your organization's access policies and providing any employee or partner with a clear path to access.

- Instantly verify digital identities:
  The trustworthy, industry-leading platform can help you securely and instantly verify an individual's employer, credentials, and any other claims.

Improve B2B collaboration with Verified ID
Let's look at a scenario in which your organization starts a project with an external organization:

• Host organization
  - Host office
  - Microsoft Entra
    - Secure access for a connected world
    - microsoft.com/entra

• Partner organization
  - Microsoft Entra
    - Verified ID

Next steps
Join us to continue your identity and access journey with Microsoft Entra Verified ID.
