1 rue Legrand du Saulle 21 000 Dijon - 41 rue Camille Desmoulins 92445 Issy-les-Moulineaux Cedex

What is dynamic pricing?

Dynamic pricing is a flexible pricing strategy whereby the company sets variable prices for a product based on rules chosen according to:

Competitors' prices

Seasonality or period

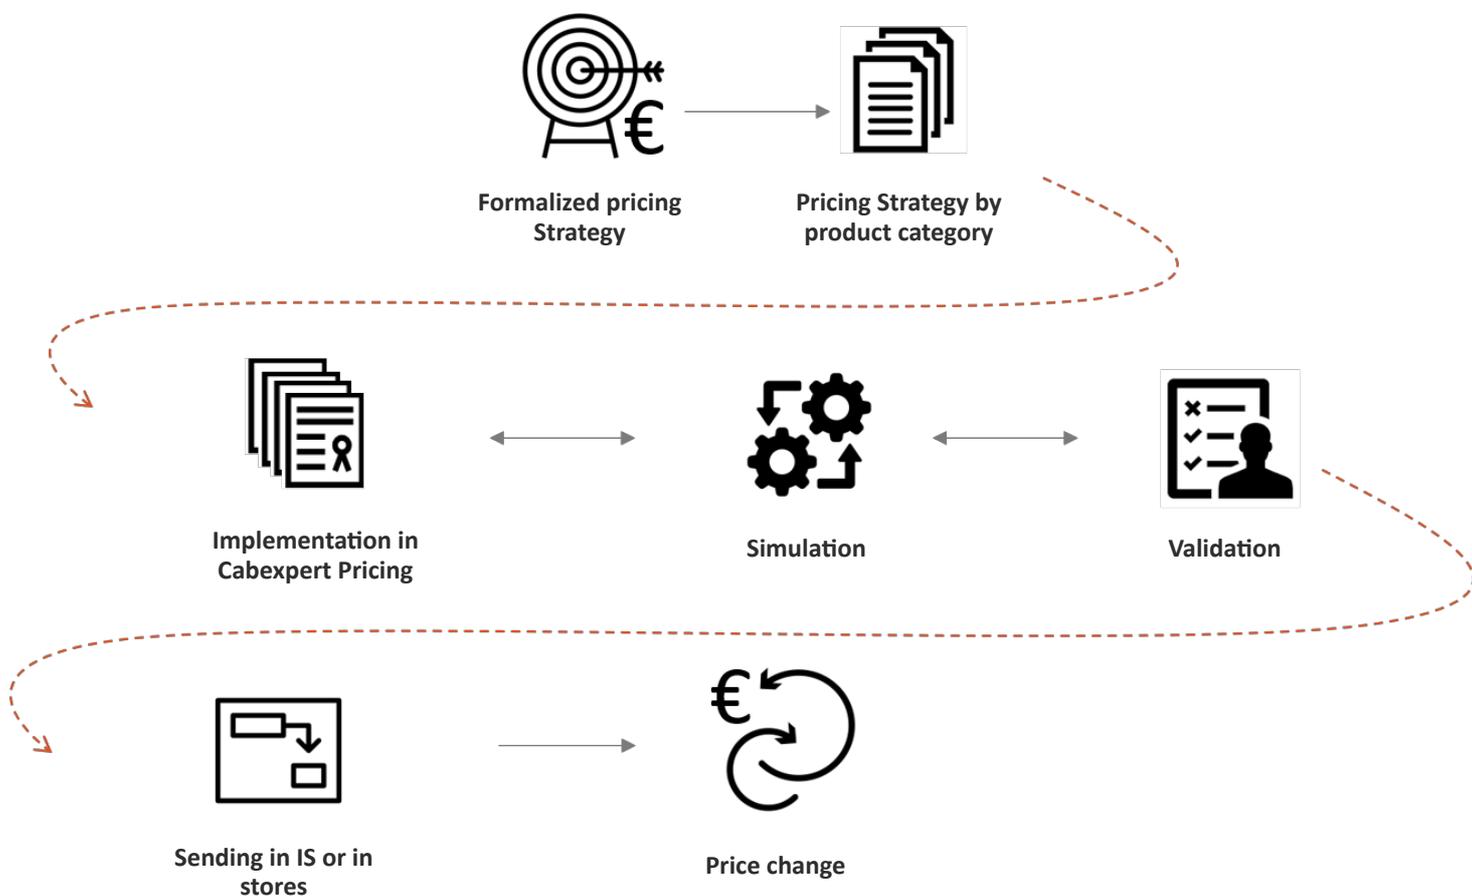

Marketing and communication

Promotional periods

The pricing strategy, a key success factor for retailers

A formalized pricing strategy is an essential element for the success of a pricing project. The pricing strategy is the set of rules that the company applies to product families and sub-families.

Dynamic pricing is implemented from the pricing strategy. CMV Informatics also assists its customers in the development and/or formalization of their pricing strategy.

Why choose Cabexpert Pricing?

Cabexpert Pricing by simulating the various scenarios and measuring the impact of the pricing strategy on economic performance makes it easier to implement your pricing strategy and improve your competitive positioning.

You can run various price simulations and see their impacts in terms of quantity, sales, margin, gross profit, index, gap... and control the results on the company's objectives.

Key features:

- Price simulations
- Implementation of dynamic rules by family
- Regional management (size, geography...)
- Promotion management
- Price elasticity management
- Management of objectives
- Analysis of the results

The benefits

- Margin optimization
- Control of the brand's price image
- Gain in market share
- Increase the productivity of your teams
- Better price positioning

Our advantages

- Easy of use
- Efficiency of the customer service team
- Flexibility of the solution
- Quality of the project approach and solution, often recommended by our customers
