# Cloud Security Implementation

# Cloud Security

The Microsoft Defender for Cloud, a tool for security posture management and threat protection will enable our customers to strengthen their security posture for resources running in Azure, hybrid, and other cloud platforms

## CHALLENGES

Multi-Cloud environments with different network topologies and hybrid deployments. RBAC for each environment and specific environmental issues that affect the cloud posture

## ASSESSMENT

Low-level design based on a multi-cloud assessment including recommendations related to each cloud resource, best solution, redesigning and reconfiguring to tighten the cloud posture

## CONTINOUS SOLUTION

Defender for cloud will be the base solution to manage the security of all multi-cloud resources and workloads, continuously assessing and hardening the cloud posture

# Customer Success: Ceragon

## CHALLENGES

- Vast cloud footprint with different resources and services
- Different security solutions from several security vendors including endpoint solutions
- Hybrid deployment

## IDEAL SOLUTION

Defender for cloud to manage the security aspects of the environment

- Continuously assessing and monitoring
- Securing resources, services and networks
- Defend – Defender flavors

## DESIRED OUTCOMES

- Full Cloud-based solution
- Multi-Cloud security posture continuous assessment
- Zero trust model, redesigning and reconfiguring continuously
- Defender for cloud incl xdr, SQL, App, containers and storage
