

mnuvo helps manufacturers of industrial equipment and machines extract valuable insights from their connected product data by providing automated reports and dashboards that help the manufacturer understand product usage, performance, failures, operating condition and other critical KPIs.

## INSTALL BASE ANALYSIS

An executive summary of where equipment is located, how it is being used and how it is performing, aggregate insights and other reports on your install base

## AUTOMATED CONDITION MONITORING REPORT

A detailed report on the machine health, what are the anomalies and trends, asset score etc. – in a periodic, automated report

## DIAGNOSTICS AND FAULTS DASHBOARD

Shift away from calendar-based maintenance to condition-based maintenance. Determine which equipment has the most faults and alerts, what is the trend over time, how does this vary based on the different versions, etc.

## USAGE AND FEATURE TRACKING

What are the most popular features, are my machines being used as expected or recommended, how can I focus my R&D spend etc. Enable usage-based business models and services

## OPERATIONAL EFFICIENCY DASHBOARD

Regular customizable operational reports for service and support of the OEM to reduce truck rolls, what operation insights can the OEM provide the customer to use the machinery more efficiently etc. – push actions to CRM and ERP systems

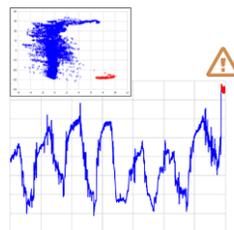

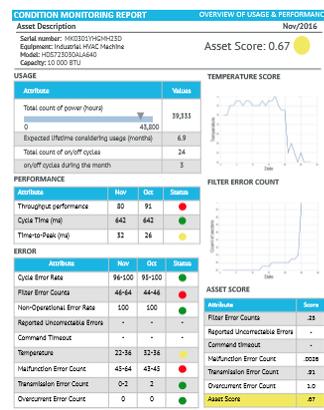

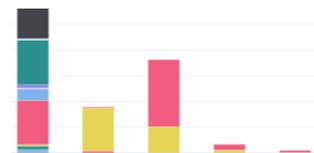

## CAPACITY AND UTILIZATION TRACKING

Which machines are being used over capacity? Understand multiple machines at a single customer site, is there an opportunity to upsell new equipment or replacement and other use cases for after-market services

## PREDICTIVE MAINTENANCE REPORT

Use data science models to predict machine downtime to schedule proactive maintenance, predict time to action for equipment requiring replenishment/replacement and other advanced data-enabled features

# mnuvo

mnuvo is an Internet of Things (IoT) company, providing Data Analytics solutions for connected Product Manufacturers and Service Providers. mnuvo extracts business value from Industrial IoT data by delivering out-of-the-box insights, automated reports and advanced IoT data science.
