

OneVue Unified Systems

A Unified Approach to Digital Transformation and Cloud Migration

Major market disrupters changed the way we do business, creating high demand for hybrid and mobile workforces; collaboration platforms; online business; data integration capabilities; and advanced security systems to protect devices, systems, and data from more sophisticated, malicious actors. The benefits of moving to the cloud have been proven over and over again. Cloud migration creates huge reductions in costs spent on IT tasks and processes that can be expedited in less time with automation and AI. Cloud migration and modernization also provide significant reductions in cyberthreats, address urgent capacity needs, application innovation and other benefits, so the question now isn't why make the move to the cloud, but how?

OneVue and Microsoft Solutions provide the technology and innovation businesses need, creating personalized, dynamic digital offerings. OneVue Unified Systems makes it easy to achieve digital strategies with more complete business outcomes, delivering advanced computing power that is easy to use, customizable, adaptable to change, and secure, with less IT maintenance and operational expense. OneVue simplifies your journey to the cloud, reducing the complexity so you can make the most of your investments.

OneVue – Your Launchpad to the Cloud and Digital Transformation

OneVue is a digital workplace platform that intelligently integrates data, content, insights, technology solutions and innovations (on-premises to cloud), displaying combined results through a single familiar interface. OneVue provides everything required to create, find, analyze, and share all sources of information and workflows with advanced security and controlled access. Experience more productive teams, more informed, confident decisions and systems that are adaptable to change, with advanced security that protects information sources wherever they reside.

Moving to the cloud is a big deal, but it doesn't have to be a big headache. OneVue is your launchpad for an easy, successful cloud migration strategy.

Assess your entire on-premises environment

Integrate information – on-premises to cloud

Optimize, migrate, and modernize your workloads

Ensure employees, clients and entire systems are secure

What Your Business Can Achieve with OneVuex

Assess and migrate servers

Assess and migrate databases

Assess and migrate web apps

OneVuex Unified Systems seamlessly integrates most computing solutions with flexibility to easily customize systems to meet your specific needs. OneVuex expands the capabilities of your existing technology to another level by integrating new innovations, while eliminating older, more costly systems.

Picture this

Innovation is difficult and staying productive is a challenge if you cannot find, access, relate or share needed information.

Understanding the objectives of cloud use, plans for migration, and if applications and managed infrastructures are optimized for cloud contribute to complexities.

Aging technology increases risks. You struggle with safety and security in apps, platforms, devices, and the organization.

With OneVuex Unified Systems and Microsoft Solutions

Achieve digital transformation with customized solutions:

- **Achieve new ideas and better results** with integrated apps, platforms, and systems like O365/M365, SQL, IBM, Oracle, Salesforce, etc., specific to your business needs.
- **Experience new possibilities and new ways to innovate**, accessing, sharing, and working with information in all connected solutions (Microsoft and non-Microsoft) – on-premises to cloud.
- **Stop searching, just ask OneVuex Unified Systems** to find all related information using AI that eliminates the need to remember filenames or their location.
- **Witness at least 40% greater productivity** with teams that collaborate across multiple environments, generating greater, more confident results.

We manage the discover, assessment, and migration process:

- **Working with Microsoft**, we analyze your organization to customize and optimize your plan, so you understand everything about your on-premises environment.
- **We provide Server Optimization**, Modern Workplace (M365), and Cybersecurity Assessments; Software Vendor Risk Analysis; and Compliance and Software Licensing Inventory.
- **We migrate and modernize your workloads** using a comprehensive approach for your application and datacenter estate.
- **Get support for key migration workloads** like Windows, SQL, and Linux Server, databases, data, web apps, and virtual desktops. We also migrate your email and file data in source environments to M365.
- **We calculate cost savings** from migrating and automatically apply insights from your assessment to your migration

Ensure the entire organization is protected:

- **Work safely**, managing projects on most devices, assured that information in all environments is protected, on-premises to cloud.
- **Experience unmatched security** with Microsoft 365 and Azure security extended from the cloud to on-premises, legacy systems.
- **Protect all connected systems and devices** from intrusion, malware, ransomware, and viruses.
- **Monitor devices and people for added safety** with multiple layers of security, meeting all compliance standards.
