

The C1 Azure Stack HCI PoC and workshop is designed to get an organization familiar with moving to a hybrid cloud model by leveraging Azure Stack HCI.

Extend the capabilities of Microsoft Azure to on-premises with a C1 2-node solution with Azure Stack HCI.

Azure Stack HCI provides hybrid capabilities with access to cloud management and security services in Azure, including offsite backup, site recovery, licensing, and cloud-based monitoring from Windows Admin Center.

Extend your Azure Stack HCI experience with Azure Benefits, Azure Backup support, Azure Site Recovery support, and using Azure Arc to help you manage and monitor Azure Stack HCI-based workloads. Plus, it supports new workloads such as Azure Virtual Desktop, Azure Kubernetes Service, and Arc-enabled PaaS services.

The proof-of-concept Includes:

- Half Day workshop covering Azure Stack HCI concepts
- Install and setup a 2-node solution with Azure Stack HCI at the customer's location, with resource planning, architecture design, deployment, and baseline testing
- Training and knowledge transfer of Azure Stack HCI with customer
- Setup workload environment on Azure Stack HCI deployment.
