WAREHOUSE EXTENSIONS APP FOR DISTRIBUTORS

IMPROVE EFFICIENCIES IN YOUR WAREHOUSE WITH THIS APP FOR MICROSOFT DYNAMICS 365.

ENAVATE's Warehouse Extensions App simplifies and streamlines warehouse management for any company, including wholesale distributors, retailers and manufacturers. This App was designed after ENAVATE discovered recurring gaps in the standard functionality while implementing Microsoft Dynamics 365 for Finance & Operations for clients.

With the Warehouse Extensions App, companies can:

1

PRINT LICENSE PLATE LABELS FROM THE WEB CLIENT
Core Dynamics 365 functionality allows companies to print license plate labels from just mobile devices within the warehouse. This App upgrades that to include other devices through the Dynamics 365 web interface.

2

PRINT LICENSE PLATE LABELS WITH NO ADDITIONAL MOVEMENTS
This feature allows users to create and print a new license plate label on demand without having to waste time processing an unnecessary inventory movement.

3

AUTOMATICALLY UPDATE PRODUCT RECEIPT AFTER PO WORK IS COMPLETE
This update allows a user to bypass the manual receipt of a purchase order, automating the product receipt when inventory is put away and all other work related to a purchase order is complete. This time-saving feature includes the ability to capture the packing slip number if required.

4

POST PACKING SLIP IN SAME RUN AS SHIPMENT CONFIRMATION
Properly posting and printing a packing slip once pick work is complete has never been possible in standard Dynamics 365. This feature allows companies to post a packing slip for a shipment in the same run as a shipment confirmation as soon as all outbound work is completed. This also includes optional packing slips printed through the work audit template.

5 BATCH RELEASE TO WAREHOUSE FOR RESERVED ORDER QUANTITIES

Distributors currently cannot create a shipment only for reserve ordered quantities. This feature allows companies to release to warehouse for reserved ordered and physical reserved in a batch.

6 RELEASE TO WAREHOUSE FROM SALES ORDERS AND TRANSFER ORDER FORMS WITHOUT SETTING A RESERVED QUANTITY

Standard Dynamics 365 requires the inventory quantity to be physically reserved when released to warehouse. To automatically release to the warehouse, you must go outside of the standard sales order and transfer order forms. This feature removes a step and allows the user to do everything from the sales order or transfer order form without a set reserved quantity.

7 CONFIRM SHIPMENT FROM WAVE/SALES ORDER/TRANSFER ORDER

This feature reduces the number of clicks required to confirm a shipment by allowing the user to do it directly from wave details, sales orders and transfer orders.
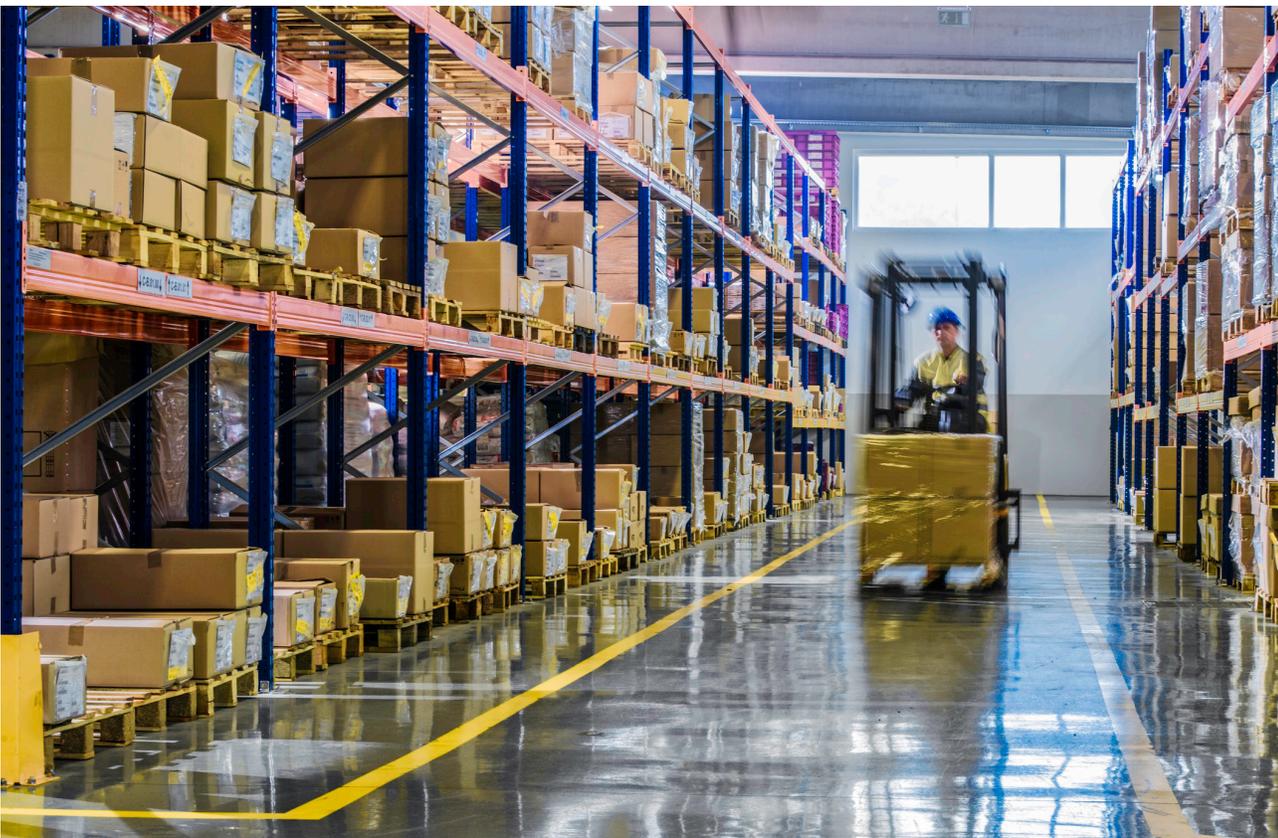

Enavate understands distribution. Enavate transforms wholesaler-distributors through Microsoft Dynamics 365 and AX technology. Equipped with experience, development credentials, deep knowledge of the wholesale distribution industry, and a reputation for disruptive innovation, Enavate helps distributors break through limitations in an increasingly crowded market.
