

SYNC for SYSPRO and Microsoft Dynamics CRM

App Name: Commerciant SYNC for SYSPRO and Microsoft Dynamics CRM

Commerciant SYNC, the #1 data integration platform for sales, makes it possible for your sales team to see SYSPRO data directly in Microsoft Dynamics CRM. With SYNC, SYSPRO and Microsoft Dynamics CRM are integrated, and you'll be able to access important SYSPRO data directly in the Microsoft Dynamics CRM.

Commerciant SYNC is available for SYSPRO 6, SYSPRO 7 and SYSPRO 8. Commerciant SYNC Agent is rapidly deployable and gives you easy access to your SYSPRO information in Microsoft Dynamics CRM. This includes customer Information, sales history, invoicing, serial numbers invoiced, inventory, multiple ship-to-addresses, and much more. New accounts, orders, opportunities, etc. created in Microsoft Dynamics CRM are SYNC'd to SYSPRO.

About the SYNC:

- Unlike traditional data integration tools such as an ETL, there is no coding, mapping, or server. We handle everything, so you can focus on growing your business.
- Changes are reflected in Microsoft Dynamics CRM in real time as the records in SYSPRO change.
- Commerciant SYNC for SYSPRO is built by ERP & CRM integration experts.
- Commerciant software provides SYSPRO users with a “CRM in the cloud” experience.
- Any field synced from SYSPRO can be displayed on the Microsoft Dynamics CRM screen. All the data Commerciant syncs to SYSPRO becomes part of Microsoft Dynamics CRM's native database. As such, you can perform any Microsoft Dynamics CRM function on the data—from graphing to dashboards to using third-party apps that can make use of the data.

SYNC for SYSPRO and Microsoft Dynamics CRM

- Commerciant has provided the means to make the data searchable in Microsoft Dynamics CRM. For instance, if you search for a serial number you can find the Invoice Records and Sales Order records that pertain to it.
- The SYNC tool only uploads or updates data when it has changed.
- Implementing Commerciant SYNC creates a simple data integration pathway between SYSPRO and Microsoft Dynamics CRM. Our SYNC solution also enables you to prevent the duplication of data, handle custom objects in Microsoft Dynamics CRM, and take advantage of the premier support.
- Commerciant has an eye for detail and has programmed its services to make efficient use of tracking changes and submitting records to the Microsoft Dynamics CRM API in a single call. The result is that Commerciant significantly reduces the likelihood of exceeding the Microsoft Dynamics CRM AP SYSPRO limits. If a daily limit is reached, which can occur during the initial SYNC of a large SYSPRO system, Commerciant will continue to SYNC where it left off on the following day.

What is Synchronized?

What Commerciant initially SYNCs:

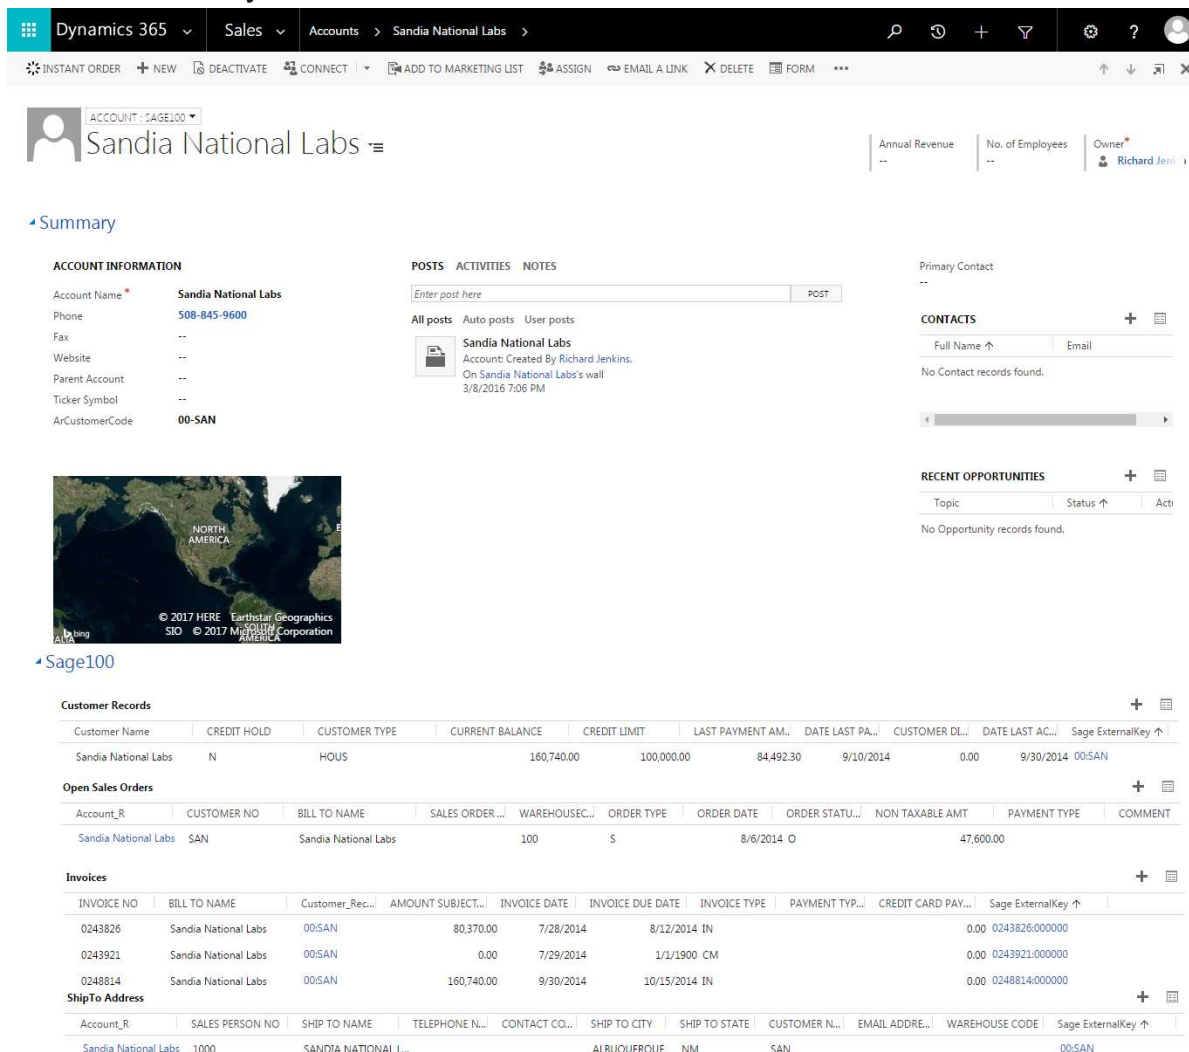

1. Financial accounting data
2. Customer data
3. Sales order data
4. Invoice data
5. Products
6. Custom Workflows / Opportunities / Orders / Invoices / Custom Objects

Copyright Commerciant LLC

US: +1 (844) 282-0401 | sales@commerciant.com | <http://www.commerciant.com>

7. Plus any other data customers request

The **SYSPRO AR Customer record** is the first item to be synced. As you can see below. Customers in SYSPRO are synchronized into Microsoft Dynamics CRM Account records. The Customer's Ship To and Bill To addresses in SYSPRO are mapped to Microsoft Dynamics CRM's address fields using a mapping schema. The SYSPRO Customer fields can be displayed on the Microsoft Dynamics CRM screen however, you may decide to show Credit Limit, Outstanding Invoice Value, and the On-Hold status onto the screen while hiding other fields. By clicking on the SYSPRO Customer Record, you can see all the fields that are synchronized.

SYNC for SYSPRO and Microsoft Dynamics CRM

Once the Customer Record is in Microsoft Dynamics CRM, Commercient then SYNCs the **Sales Orders and their Detail Lines** and relates them to the corresponding Microsoft Dynamics CRM Account record. Commercient has consolidated the Sales Order data and the **Invoiced Sales Order data** into single merged objects in Microsoft Dynamics CRM to simplify the Microsoft Dynamics CRM screens. As seen below. With this approach, a user can easily see Sales orders and Detail Lines with their Invoices, as well as viewing the status of Sales Orders as they change in SYSPRO. Cleansing of Cancelled SYSPRO Sales Order data from Microsoft Dynamics CRM is performed automatically.

The screenshot shows the Microsoft Dynamics 365 interface with the 'Active Sage Open Sales Orders' table. The table has columns for Account, Customer, Bill To Name, Sales Order Number, Warehouse, Order Type, Order Date, Order Status, Non Taxable Amount, Payment Type, and COB. The table contains 20 rows of data, including sales orders from SIA SECURITY TECHNOLOGY, New Pig Corporation, Sandia National Labs, GOLDCREST INT'L SIN..., GREENWOOD SOLUT..., ASESORIAS Y TECNOL..., LONE STAR SAFETY & SUP..., MAYFLOWER UK, SAFE RACK LLC, Quatrex Environmental, MEDSAFE, CYNDAN CHEMICALS, SAFEWARE, INC., OIL MOP, LLC, and SPILL 911.

Commercient has crafted the relationships with the data objects in Microsoft Dynamics CRM so that you have the power to decide which objects you would like to display onscreen. You are still always able to click to other parent- or child-related objects. For example, an Admin user can remove the Sales Orders from the Account screen but leave their Detail Lines. This allows salespeople to see what was sold and shipped from the main Account screen without clicking anywhere; but they can still click the Sales Order link on the detail line to open

The AR Invoice data is useful for spotting unpaid invoices and being able to drill down into the data. The other records which are synchronized include the **AR Customer Ship to Tax Exemptions, Item Master, and Item Warehouse**. Commerciant creates **Microsoft Dynamics CRM Products** from the **Item Master** and associates the entire **Item** and **Warehouse** records to the Product. This gives you the ability to have accurate product data and Inventory availability. In addition, you can **SYNC any Database, table, or view**.

What if I have an existing Microsoft Dynamics CRM database?

Clients with existing records in both SYSPRO and Microsoft Dynamics CRM must consult with the Commerciant Professional Services team to perform a clean-up and match-up of records before the Commerciant SYNC is enabled.

Can I limit or control the data that I SYNC?

Yes. Commerciant has created an open methodology of allowing you to control the filtering of data in the SQL WHERE statement while maintaining the integrity of relationship mapping and efficient syncing methodologies. Within the WHERE you can perform subqueries, filters, and cross-table and cross-database subqueries to affect the rules. In addition, you can also map custom tables or views. (Charges may apply.)

What else does Commerciant do with Microsoft Dynamics CRM?

Data synchronization is the first step towards a total solution. Ask about these additional modules for SYSPRO:

- Quote Processing
- Web-based Product Configurator
- Opportunity and Quote -> Sales Order Conversion
- Products and Price Book SYNC
- Product Record Types
- Cases with Serial Numbers Invoiced and Service Orders
- Opportunity Commissions Calculations based on SYSPRO Invoices
- Automatic SYSPRO Sales Order Email Engine
- Automatic Invoice Email Engine
- Dealer/Wholesaler Self-Service Portal
- Custom Data synchronization
