Keboola

Digital Sandbox for Enterprise

digitalsandbox@keboola.com | www.keboola.com

+ Digital Sandbox by Keboola

> Keboola's sandbox environment for our data science team gives us a way to develop Python applications without the performance or connectivity limits we were dealing with in the past. We quickly piloted multiple research projects for anti-fraud and underwriting, as well as face recognition biometrics, location distance verification, and automated picture meta data extraction.

> - Risk Innovation Department, Large Commercial Bank

In today's competitive environment, companies need to make a choice: innovate or die. This used to only mean build within, but today it is a combination of build, buy and ally. And in all cases, it requires a radically increased enterprise-wise capability and capacity for testing — rapidly, across silos, and with entities from outside their walls.

The Keboola platform is an integrated data hub which allows for quick, low-risk experiments with your data. Developers love how easy it is to use and how much time it saves. Security executives appreciate participating early in experimentation and acting as strategic partner, rather than a roadblock.

The Digital Sandbox for Enterprise provides an easy, safe and fast environment to innovate.

The result for your company: dramatically increased output of experiments and time to value.

The result for you: ideas and meaningful change, brought to life.

+ HOW WE WORK

Three ways to engage the power of the Keboola platform

One-off Proof of Concept.

Rapidly stand up a case-specific, secure test environment with 3rd party data, or your own.

Your Private Digital Sandbox.

Dedicated environment to orchestrate your data across a portfolio of digital transformation initiatives.

Enterprise-wide Integrated Data Hub.

Full production environment with audit trail and full security. Transparency, flexibility and control, in a single click.
