Boltrics
WITHOUT A DOUBT

3PL Dynamics: the transition from registration to monitor and control.

3PL Dynamics, the software standard for logistics service providers

3PL Dynamics is a complete software solution fully attuned on the logistics suppliers. The solution is ERP, WMS and TMS all-in-one. All business and logistics processes are integrated into the software. Standard. From a simple entry into storage to RF scanning, Cross Docking, Customs Brokers and EDI. But also for purchasing, sales, and finance. Integrated and customized. And for a fixed price.

The branch standard as the standard

Why develop custom-made software when the branch standard already provides? 3PL Dynamics includes all the branch-specific functionality you require. Standard! No expensive and time consuming custom-made programs needed. No endless deployments with high risks. What you get is a complete and quick deployable system that fits your organisation. The software connects seamlessly with the processes and roles within your organisation.

3PL Dynamics picks up where TMS or WMS stops

3PL Dynamics is based on Microsoft Dynamics 365 Business Central, complemented with solutions specifically developed for logistics service providers. The software automates logistics processes in your warehouse, making it run efficiently and seamlessly. With a minimum of administrative actions and movements. Lowering costs and improving quality. Your first profit!

Your business in control

3PL Dynamics streamlines your operations and makes it transparent. Employees easily find and share information. Management reports provide actual and clear information, so you know what is happening and can make deliberate adjustments. Customers have online access to their current inventories, a service that reduces the number of phone calls. And that fosters productivity.

Innovative Microsoft technology

Boltrics builds and relies on Microsoft Dynamics 365 Business Central: a solution that combines flexibility with a high degree of stability and ease of use. Our software works seamlessly with familiar applications such as Outlook, Word, and Excel. Therefore, your employees quickly find their way into the system.

"Boltrics' solution is built within the standard Microsoft Dynamics technology – without customization. Allowing us to join upgrades without a fuss and assuring us that we won't suffer from outdated software in the future."
Brennus van der Klaauw, Managing Director at VCK Logistics

Branch knowledge of Boltrics

Boltrics knows your business processes and knows what is going on. We translated this knowledge into industry-specific functionalities that save time and costs, and increase sales and profitability. 3PL Dynamics supports your employees in the daily logistics business and contributes to the business goals of your company.

Joint innovation, shared costs

3PL Dynamics is developed for and by the branch. Functionalities are developed and shared branch-wide. All our customers work on the same version, so we can automate updates. This allows the software to be always up to date, even years after implementation. Without time and effort on your part.

Your partner in logistics services

As a branch specialist for logistics service providers, Boltrics focuses on the development and implementation of standard industry-wide software solutions. In short terms: collective customized, so individual adjustments can remain limited.

The advantages:

- One integrated solution
- More efficient operations
- Higher service level towards customers
- Improved reliability of delivery
- Lower costs
- Actual and reliable management information
- Increased productivity

Work more effectively with the branch standard

- Specifically designed for your business processes
- Microsoft software, assures you continuity and technical innovation
- Further development based on the actual needs of the branch
- Development costs shared branch widely
- Low maintenance costs

"In the past, we deliberately opted for systems from different software vendors. We did not want to be dependent on one software supplier with the risk of major downtime for all systems at once. Now we're using the reverse strategy and we'd like everything in one system."

Rene Hoogvliet, Chief Information Officer at Estron

One flexible state-of-the-art platform with logistics solutions for every branch

Efficient processes and control of your margin define your competitive position. This is in contrast to an expensive custom-made software solution. Which might fit like a glove, but for how long? Adding changes afterward usually becomes very expensive, with the risk that you will be faced with the limits of your own customization. Choose Boltrics' state-of-the-art platform: the future-proof solution for storage, transshipment, and transportation of goods by land, sea and air.

Based on the power of Microsoft Dynamics 365 Business Central

Our software is developed for and by the branch. Functionalities are developed and shared branch-wide. All our customers work on the same version, so we can automate updates. This allows the software to be always up to date, even years after implementation. Without time and effort on your part. Thanks to the unique features of Microsoft Dynamics 365 Business Central, maintenance and updates take place without disrupting the continuity of your business. Of course, you would expect nothing else from the branch standard!
