

ABBYY® FlexiCapture® Cloud

Powerful document capture
within your application

ABBYY FlexiCapture Cloud delivers ABBYY's advanced data capture platform capabilities via REST API and web interfaces. Customers can rapidly configure and deliver their Content IQ solution, taking advantage of our cloud services to automate and accelerate their document-driven processes. Advanced machine learning and AI improve classification and data extraction results, enabling core processes to support better, smarter, faster decisions.

FlexiCapture Cloud enables organizations to accelerate digital transformation by complementing their automation systems with new and advanced cognitive capabilities that liberate the intelligence locked in their documents.

Why ABBYY for automated document processing?

INTELLIGENT CAPTURE: Built with ABBYY Content IQ technology, ABBYY FlexiCapture Cloud provides cognitive functionality for automatic classification, data extraction, learning, and verification.

AUTO-LEARNING: Leveraging advanced machine learning methodologies, FlexiCapture can be deployed quickly and improve over time through user interaction and training, eliminating long delays and high setup costs.

REST API: REST API allows external systems to upload documents, retrieve extraction results, and use ABBYY verification UI. Customers have the option to develop customized verification UI and train the platform by providing feedback about the quality of results.

SINGLE SOLUTION FOR ALL DOCUMENT TYPES: Documents arriving in diverse formats—including Word documents, Excel® spreadsheets, PDFs, e-mails, and scanned images—are accurately identified and processed in a single workflow.

TRUSTED ENVIRONMENT: ABBYY FlexiCapture Cloud service runs on Microsoft® Azure, leveraging its security and data protection and giving you a choice of geographic regions.

ADVANCED CLASSIFICATION: Leveraging image, text, and instruction-based classification, FlexiCapture Cloud can classify documents by form and content, supporting optimization of information-driven processes.

Use cases

Process documents in the cloud

An intuitive user interface allows users to process documents directly with the ABBYY cloud application.

1. Customer configures and controls processing settings via a FlexiCapture project.
2. Service runs in the cloud.
3. Documents come from scanning/mobile app, email, or other source.
4. Results delivery and data set synch either rely on standard ready-to-run connectors or are developed by a partner.

Deliver capture services through REST API

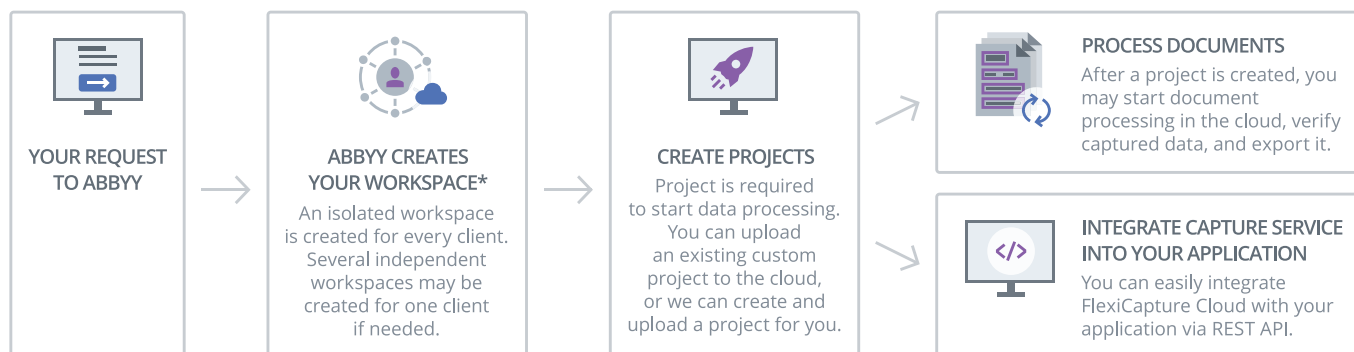

ABBYY FlexiCapture Cloud supports a RESTful API, enabling partners, integrators, ISVs, and customers to easily consume production capture services as part of their applications and solutions.

- FlexiCapture Cloud API allows users to consume capture services from existing cloud applications.
- FlexiCapture Cloud learns from processing and improves results for all end customers.
- REST API enables import, export, and data set synchronization.

Why use FlexiCapture in the cloud?

- **FREE TRIAL:** Try our online document processing with no strings attached.
- **QUICK START:** No reason to wait for hardware to be ordered, staged, and configured. Our resources are standing by to assist you.
- **ZERO CAPEX:** No hardware or software to purchase, and no installation costs.
- **SIMPLE MAINTENANCE:** ABBYY, your authorized ABBYY partner, or your certified FlexiCapture administrator can support your configuration needs.
- **AVAILABILITY:** FlexiCapture Cloud resides as a service in the distributed Microsoft Azure cloud, optimizing access from your location wherever you are.
- **AGILITY:** ABBYY provides the latest available version of the product and manages the always-up-to-date system configuration to improve its performance and features.

How to get started

ABBYY provides interactive online resources for learning about FlexiCapture Cloud and REST API.

* ABBYY FlexiCapture Cloud is a multi-tenant service with multiple customers sharing resources in a common environment. Data walls exist between tenants so that data and roles are not visible or transferrable from one tenant to another.
