

If you are responsible for inspection processes and ensuring your products meet certification requirements, you will recognize these challenges:

"According to its FAI status, I'd like the flexibility to either have warnings or a block during the production processes if a failure occurs."

"We need to be able to easily see a list of all out of date released products." "We need an easy to use system that we can set-up and run quickly that works within my existing Dynamics system."

# Why choose Prodware to support your production cycle needs in Dynamics 365 for Finance & Operations?

As a Microsoft partner, Prodware has developed and implemented Dynamics 365 and AX projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their quality management needs.

# The First Article Inspection accelerator helps by:

- Identifying the certification on the released product, with delay and type validation
- Blocking the process if the product certification is out of date
- Producing a list of out of date released products.

From sales order line

Creation of sales order line with released product: Warn or Block based on FAI status

At production order creation

Creation production order with end product & BOM components selected: Warn or Block based on component's or end product FAI status

Full control at routing

Production order creation: Warn or Block based on routing header FAI status

Align with vendor guidelines

Creation of purchase order line with released product: FAI approval vendor parameters aligned.
