Warehouse Management System Lite

Optimize Costs, Efficiency and Service Levels

Globally, warehouse operations is shifting from a cost to profit center as businesses realized that while reducing the costs of operating a warehouse, their warehouse operations efficiency and service levels are important drivers of business profitability.

Targeted at small-medium enterprises (SMEs) that is looking at warehouse management system that offers slightly more value than those available in the market yet not too clunky for daily operations of the SMEs. Our Y3 WMS lite has a nice balance between feature rich and usability by incorporating design thinking in its development to ensure user centric design.

Our more than three decades of domain knowledge in supply chain coupled with design thinking methodology allows the creation of this best in class Y3 WMS lite that will empower SMEs to optimize cost, efficiency and supply chain profitability.

Benefits of Y3 WMS Lite

Reduce Inventory Cost

Predefined picking rules such as FIFO and FEFO reduce stock obsolescence especially for products with expiry date. Inventory aging report monitors your inventory level and value.

Create Traceability

Track all inbound, outbound and goods movements via product lot and serial number which is useful for lot recall management. Custom permit tracking allows SMEs to meet statutory requirement.

Business Visibility

Comprehensive list of reports which could improve business visibility to allow management and operations to make timely data driven decisions.

Reduce Time Spent

Predefined rules for auto-putaway and direct receiving to storage location significantly reduce time spent. Auto picking logic and mobile picking also streamline outbound operations to ensure accuracy, efficiency, timeliness, compliance and optimal customer service.

Increase Output & Efficiency

Improve collaboration and communication with vendors, suppliers and transporter by supporting bi-directional flow of information such as receiving and sending of ASN leading to improved visibility and efficiency.

Prevent Sales Opportunity Loss

Monitor and prevent under stock by setting a minimum threshold to trigger auto replenishment.
