Reflex Warehouse Management System
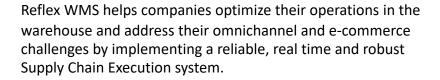

Optimize your logistics processes and meet your e-commerce and omnichannel challenges

Reflex WMS helps companies optimize their operations in the warehouse and address their omnichannel and e-commerce challenges by implementing a reliable, real time and robust Supply Chain Execution system.

Reflex optimizes each logistics process in your warehouses: receipts and shipments, order picking, stock management and inventories, transport and deliveries, quality control and returns management, etc. Its high-level dashboards provide you with real-time visibility to efficiently manage your logistics operations. Its wealth of features and flexible configuration mean that our warehouse management software can adapt to all activities and handle all types of logistics flows (BtoB, e-commerce, omni-channel). Able to handle large volumes of orders by pallet, package or unit, it ensures end-to-end traceability of products.

Why customers use Reflex Warehouse Management System?

- To improve logistics performance and productivity

- To get a real-time traceability of products

- To deliver their customers quickly with a high quality of services

- To increase customer satisfaction

Bol.com case study, e-commerce leader in the Netherlands and Belgium

In order to deal with its double-digit growth and increase its customers' satisfaction, bol.com looked for a reliable and flexible WMS solution, able to manage with fast performance high volumes, in order to be able to deliver its clients quickly and get a real time traceability of its products

« Reflex WMS excels in usability and its core functionalities can easily be extended to create a solution that can fit your business needs 100% ».
