Introduction

Map My Relationships is a productivity app that enables Dynamics 365 CRM users to visualize relationships between Entities or related records in a single view. It also allows users to easily navigate to related records and perform various activities like create Email, Phone Call or Appointment. Users can thus, get information at a glance leading to swift action and timely completion of various tasks.

Salient Features:

- 360 degrees view of all important data of the record in a single view
- Support both OOB and custom entities
- Support for 1:N, N:1 as well as N:N information
- Begin with a quick summary with the ability to drill down to the details
- Navigate easily and quickly to any of the records in the relationship
- Ability to quickly record any activity like phone call or appointment for the related records
- Support for viewing aggregate values without the need for creating rollup fields
- Control can be configured for Unified, Mobile and Tablet experience

Available for: Microsoft Dynamics 365 CRM 9.1 and Above

Deployment: Online

Security Roles

Two security roles, particularly for **Map My Relationships**, come along with the solution.

- Map My Relationships Administrator The Administrator has given the privilege for License Registration and has organization-level access of all entities of Map My Relationships i.e. Entity Configuration and Entity Relationships. The user with having this role would be able to set up the Map My Relationships view using advanced configuration i.e. would be able to define settings in Entity Configuration and Entity Relationships records.
- 2. **Map My Relationships User** The users with having this role would be able to see the Map My Relationships view in Dynamics 365 forms.

Note: System Administrator has all the rights that Map My Relationships administrator has.

Map My Relationships Configuration

Map My Relationships has been built using the PowerApps Control framework. The Administrator of the system has to add the Map My Relationships control on the entity forms. To configure the view the administrator has two options i.e. basic configuration and advanced configuration. The below table highlights the difference between basic configuration and advanced configuration.

Particulars	Basic Configuration	Advanced Configuration
Define all types of relationships	Yes	Yes
Perform deafault actions (Create email, Phone Call and Task)	Yes	Yes
Configure tooltips to see more information of related records	No	Yes
Configure which actions to allow for related records	No	Yes
Configure which images to display to identify related records	No	Yes
Configure grouping and aggregation for related records	No	Yes

Map My Relationships with Basic Configuration

Prerequisites: The user should have the System Administrator or System Customizer role.

Add Map My Relationships view on the form: Decide the entity on which the users would be able to see the related records of that entity. The entity may be a common use entity.

Note: The Administrator can configure the Map My Relationships control for any number of entities in the system.

In this document, we will configure the Map My Relationships for the Account entity.

 Navigate to Default Solution Settings → Customizations → Customize the System → Expand Entities and select the entity.

3. The next step is to bind a Map My Relationships control to any text field. The Best approach is to create a new text type of custom field. Add a custom text field on the form wherever the users/administrator likes to see it. There is no limitation on where to add the Map My Relationships view on the form.

Go to existing tab or a new tab on the form and add newly created custom field in the section.

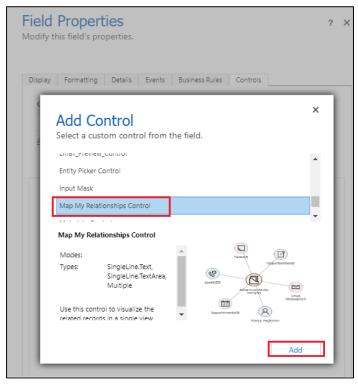

Map My Relationships – User Manual	
INSERT INSERT <th< th=""><th>0</th></th<>	0
Save Edit Select Form Upgrade	
Form headers now default to high density to display more data. Use the new form designer to edit header density. Learn more Account Solution: Default Solution	Field Explorer >

One to Many Relationships Compatible types: SingleLine.Text, Comma seperated list of one to m						
Hide Default Control						

One to Many Relationships: Enter the comma separated one to many relationship schema names. Ex: Account_Emails, Account_PhoneCalls

Here Account is the primary entity where control is being added and Email and Phone calls are related to account as 1:N relationship. This will show emails and phone call of the account record.

Follow 'How to get relationships schema name?' section to know how to find relationships schema name.

Many to One Relationships: Enter the comma separated many to one relationship schema names. Ex: account_primary_contact, account_originating_lead

Here Account is the primary entity and contact (Primary Contact) and lead(Originating Lead) are the related entity with N:1 relationship.

Follow 'How to get relationships schema name?' section to know how to find relationships schema name.

Many to Many Relationships: Enter the comma separated many to many relationship schema name.

Allow Actions?: Specify whether the user should be able to perform actions such as Create Email, Create Phone Call or Create Task. Enter 0 for Yes and 1 for No. Default is Yes i.e. 0.

6. Click the edit button which is present against the property. This will open a 'Configure Property...' window.

	Rene Vales	A. Datum Corporation (sample)		nail ages(2)		

13. If the control shows following message, **'Something went wrong. Please check the configuration'** then check if the invalid relationships has been added in the properties or not. We can only add those relationship records which are available to read.

Map My Relationships Advanced Configuration

Prerequisites: The user should have System Administrator or System customizer role. To create configuration records the 'Map My Relationship Administrator' role can be assigned to the user.

1. Entity Configuration: This entity enables the system administrator to define for which entity the Map My Relationships view should be displayed.

Go to 'Map My Relationships' app and create 'Entity Configuration' entity record.
