RevenueAi
by ElectrifAi

Realize Your Full Revenue Potential.

Identify, resolve, and reduce missed charges with RevenueAi.

Revenue Ai is a SaaS based, predictive analytic solution that harnesses the power of machine learning (ML) to identify, prioritize, and predict missed charges— revolutionizing the integrity of your revenue cycle.

Revenue Ai is part of the ElectrifAi suite of artificial intelligence (AI)-based products that solve practical business problems. We don't accept missed charges as unavoidable and unquantifiable costs—we see them as a powerful opportunity to reclaim revenue.

By identifying hidden patterns, Revenue Ai maximizes visibility, increases revenue, reduces risk, and drives successful decisions.

How can you find money if you don't know where to look for it?

For revenue cycle managers at hospitals and health systems, this is a frustrating question centered around one very large and costly issue: missed charges. In a billion dollar health system, if just 1% of total charges are missed, it adds up to $10 million in lost revenue. Can your system afford this loss?

With tens of thousands of claims coming through the door each day, workflows dominated by time-consuming and error-prone manual processes, and disparate systems operating across departments, every hospital experiences missed charges—but most have no way to identify them. That's where we come in.

The bottom line? You will see the benefits of Revenue Ai within just weeks: reduced missed charges and increased ROI. And because Revenue Ai is a dynamic solution—and not static— the more you use it, the smarter it gets. Now that's smart revenue cycle management.
