

# nodetrace..

defining system performance

The only proactive performance monitoring  
tool for Microsoft Dynamics 365 for  
Finance and Operations

**AGILECADENCE**

POWERING INNOVATION. SIMPLIFYING TECHNOLOGY.

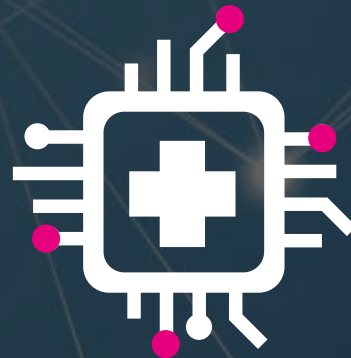

# nodetrace.

defining system performance

Nodetrace does what Microsoft's Lifecycle Services and Application Tracker can't. It allows you to manage your platform proactively and to identify potential issues before they escalate.

Nodetrace is  
**proactive**,  
not reactive

Nodetrace is the only  
performance alerting tool  
for your Production system

Nodetrace works  
for both Cloud  
and On-Premise

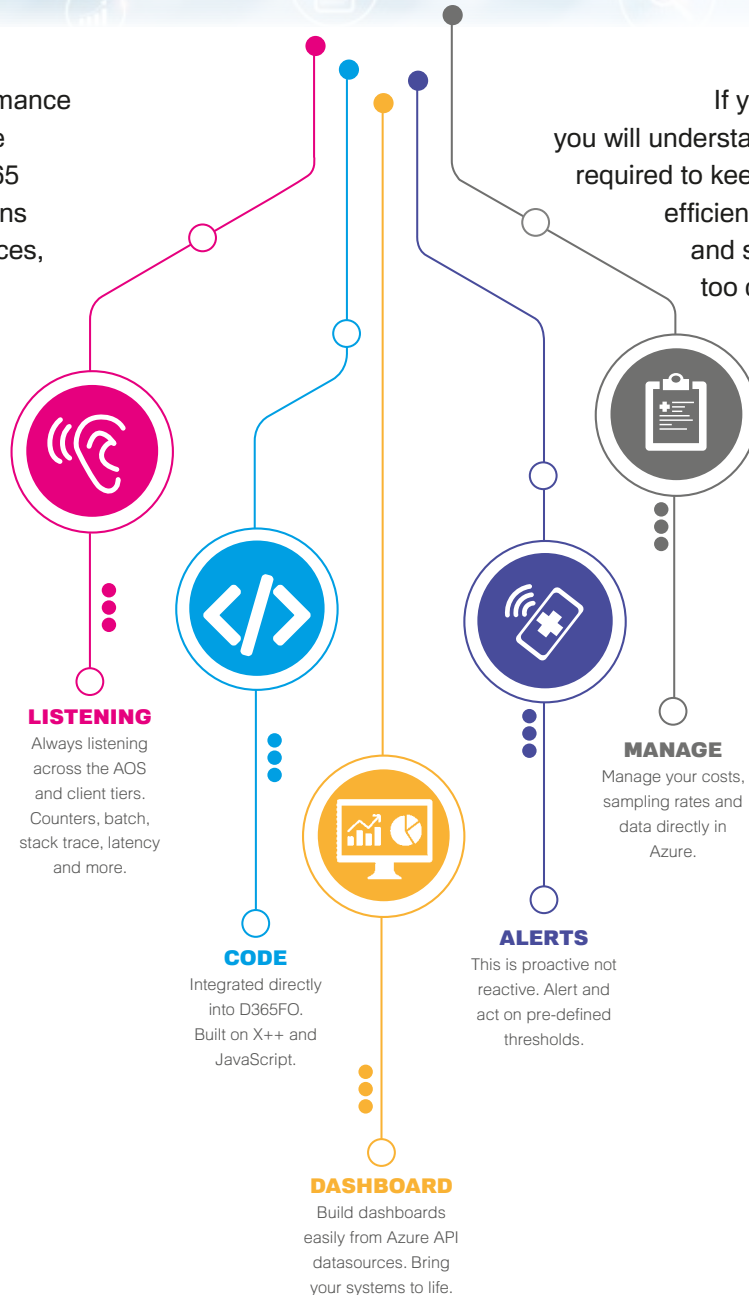

# nodetrace.

defining system performance

Currently the only performance monitoring tools available to Microsoft Dynamics 365 for Finance and Operations users are Lifecycle Services, which is reactive, and Application Tracker, which doesn't work in Production.

If your business uses D365FO, you will understand the significant resources required to keep your ERP system running efficiently. Issues with performance and slow running systems are all too common and are frustrating, time consuming and expensive for your technical team.

We have built a solution that pushes performance and error data to Azure Application Insights. Key to our product is that it covers two simple concepts: it provides information on server performance; and gives metrics on web page performance. This allows you to:

- Spot trends and fix issues before they escalate
- Improve user experience
- Speed up processes
- Save time and money

Capability (PRODUCTION)	Nodetrace	LCS
Near real-time performance monitoring	✓	✓
Data available for large screen dashboards / API access	✓	
Web page interaction statistics and performance	✓	
Activity monitoring	✓	✓
Environment monitoring	✓	✓
Threshold alerting	✓	
AOS performance counters	✓	✓
Stack trace alerting	✓	
User flows	✓	
Database statistics and performance		✓
