

AXTEND DM

AXTEND Data Management FAST, SIMPLE, SECURE

AXTEND Data Management is used for validating and importing data into *Dynamics 365 for Operations*

AXTEND Data Management (ADM) is a combination of a BYODB SQL database with predefined tables and SET based validation and a high performance D365 F&O application for importing data using SQL queries. ADM supports incremental data loads which is useful when integrating D365 F&O with external applications.

The solution is specifically designed to accelerate the migration process by minimizing number of testing cycles and automating data loads. Each ADM data import task is extensible to support population of related entities.

Main benefits **ADM**:

- Fast validation by offering consistency- and configuration validation before loading data.
- Streamlined and automatic import process.
- Simple, yet advanced UI for monitoring the load process and measuring load times.
- Enhanced support for financial dimensions.
- Error handling linked to staging data per import line.
- Support for update of master data and incremental transactional import.
- High performance load using direct SQL.

By using **AXTEND Data Management** you can save time and valuable resources. Our solution and team of experts can Help you with complicated migration and Integration projects.

By using **AXTEND Data Management** you can be sure that your data transfer is fast, secure and reliable.
